

# 433 mhz wireless station with hygro-thermometer

## General information

This wireless weather station displays accurate and detailed information about the current weather. Not only does it show the temperature in degrees Celsius or Fahrenheit, it also measures the indoor and outdoor temperature and the humidity percentage. To make things even more interesting, the outdoor temperature and humidity can be stored on three RF channels and you will also see a trend indication of the temperature and humidity. The weather station is equipped with four temperature pictograms that display the current weather: sunny, semi-unny, cloudy and rainy. The station also displays the time and date and can be used as an alarm clock, it even includes a snooze button! The weather station also has a moon phase function and can display information in seven languages.
