

Make every step and heartbeat matter with ACME SW301 GPS Smartwatch! Thanks to integrated GPS you will be able to check your location or track the exact route of your run or walk without having your phone with you. However, after syncing these two all the data will be available in the special app. Smartwatch also allows you to examine more closely your surroundings, like checking air pressure, altitude and temperature. It features high accuracy heart rate monitor and multi-sports mode which combined make the results of your exercising precise and easy to track and improve on. In addition to that, the watch informs you about incoming calls and messages, emails or any other notifications you usually get to your phone. Besides, you will be able to set your own reminders in the watch to drink more water or go for a walk. All the information mentioned is clearly visible in the colourful screen which is easy to control thanks to touch-sensitive surface and digital crown.

## Features

### Integrated GPS

Allows to track data in real time or check your exact location without phone

### High accuracy heart rate monitor

Tracks heart activity while you are both exercising and resting

### Check your surroundings

You may check air pressure, altitude and temperature in the watch thanks to integrated sensors

### Water-resistant

IP66 protection against water and dust, e. g. you can wear the watch while taking the shower or walking in the rain but not to go swimming nor diving

### Multi-sport function

Allows to select several different kind of activities
