3. Hardware Installation

Note: The maximum amount of power available is 30 Watts per port and 246 Watts total. If a power overload has occurred, the Switch will prioritize the distribution of power by port (from lowest to highest). That is, port 1 will receive the highest priority and port 4 will receive the lowest priority. The ports with lower priority will have their PoE function disabled until sufficient power becomes available.

1. Plug the power cord into the **power adapter**. Connect the **power adapter** to the TPE-TG160g and then to a power outlet.
2. Connect an RJ-45 network cable from the TPE-TG160g to your computer's network port.
3. Connect an RJ-45 cable from a port on the TPE-TG160g to the **network** port of the PoE device (e.g. TV-IP310PI).
- 4: Verify the following LEDs are on: **Power**, **PoE Status** and **Link/ACT**.
