# **About This Manual**

All information in this manual has been carefully verified to ensure its correctness. In case of an error, please provide us with your feedback. Thecus Technology Corporation reserves the right to modify the contents of this manual without notice.

Product name: Thecus OS7.0 used models Manual Version: 1.3 Release Date: October 2016

# **Limited Warranty**

Thecus Technology Corporation guarantees all components of Thecus NAS products are thoroughly tested before they leave the factory and should function normally under general usage. In case of any system malfunctions, Thecus Technology Corporation and its local representatives and dealers are responsible for repair without cost to the customer if the product fails within the warranty period and under normal usage. Thecus Technology Corporation is not responsible for any damage or loss of data deemed to be caused by its products. It is highly recommended that users conduct necessary back-up practices.

Check the functions that are available on your particular Thecus NAS model at: <a href="http://www.Thecus.com">http://www.Thecus.com</a>

# **Safety Warnings**

For your safety, please read and follow the following safety warnings:

- Read this manual thoroughly before attempting to set up your Thecus IP storage.
- Your Thecus IP storage is a complicated electronic device. DO NOT attempt to repair it under any circumstances. In the case of malfunction, turn off the power immediately and have it repaired at a qualified service center. Contact your vendor for details.
- DO NOT allow anything to rest on the power cord and DO NOT place the power cord in an area where it can be stepped on. Carefully place connecting cables to avoid stepping or tripping on them.
- Your Thecus IP storage can operate normally under temperatures between 5°C and 40°C, with relative humidity of 20% 85%. Using Thecus IP storage under extreme environmental conditions could damage the unit.
- Ensure that the Thecus IP storage is provided with the correct supply voltage. Plugging the Thecus IP storage to an incorrect power source could damage the unit.
- Do NOT expose Thecus IP storage to dampness, dust, or corrosive liquids.
- Do NOT place Thecus IP storage on any uneven surfaces.
- DO NOT place Thecus IP storage in direct sunlight or expose it to other heat sources.
- DO NOT use chemicals or aerosols to clean Thecus IP storage. Unplug the power cord and all connected cables before cleaning.
- DO NOT place any objects on the Thecus IP storage or obstruct its ventilation slots to avoid overheating the unit.
- Keep packaging out of the reach of children.
- If disposing of the device, please follow your local regulations for the safe disposal of electronic products to protect the environment.
- Risk of explosion if battery is replaced by an incorrect type.
- Dispose of used batteries according to the instructions

# **Chapter 1: Introduction**

### Overview

Thank you for choosing the Thecus IP Storage Server. The Thecus IP storage is an easy-to-use storage server that allows a dedicated approach to storing and distributing data on a network. Data reliability is ensured with RAID features that provide data security and recovery—over multiple Terabyte of storage are available using RAID 5 and RAID 6. Gigabit Ethernet ports enhance network efficiency, allowing Thecus IP storage to take over file management functions, increase application and data sharing and provide faster data response. The Thecus IP storage offers data mobility with a disk roaming feature that lets you swap working hard drives for use in other Thecus IP storage, securing the continuity of data in the event of hardware failure. The Thecus IP storage allows data consolidation and sharing between Windows (SMB/CIFS), UNIX/Linux, and Apple OS X environments. The Thecus IP storage's user-friendly GUI supports multiple Languages.

# **Product Highlights**

#### **File Server**

First and foremost, the Thecus IP storage allows you to store and share files over an IP network. With a Network Attached Storage (NAS) device, you can centralize your files and share them easily over your network. With the easy-to-use webbased interface, users on your network can access these files in a snap.

#### **FTP Server**

With the built-in FTP Server, friends, clients, and customers can upload and download files to your Thecus IP storage over the Internet with their favorite FTP programs. You can create user accounts so that only authorized users have access.

#### **iTunes Server**

With the built-in iTunes server capability, the Thecus IP storage enables digital music to be shared and played anywhere on the network!

#### **Printer Server**

With the Thecus IP storage's Printer Server, you can easily share an IPP printer with other PCs connected to your network.

### **Multiple RAID**

Thecus IP storage supports multiple RAID volumes on one system. So, you can create RAID 0 for your non-critical data, and create RAID 1,5,6,50 or 60 (depend on model) for mission-critical data. Create the RAID levels depending on your needs.

### **iSCSI** Capability

Thecus IP storage is not only a file server, but it also supports iSCSI initiators. Your server can access Thecus IP storage as a direct-attached-storage over the LAN or Internet. There is no easier way to expand the capacity of your current application servers. All the storage needs can be centrally managed and deployed. This brings ultimate flexibility to users.

### **Superior Power Management**

Thecus IP storage supports schedule power on/off. With this feature, administrator can set at what time to turn on or off the system. This feature is a big plus for people who want to conserve energy. Wake-On-LAN enables administrator to remotely turn on the system without even leaving their own seat.

# Package Contents

N2810 Series/ N4810 Series

The Thecus IP storage should contain the following common items:

- System Unit x1
- QIG (Quick Installation Guide) x1
- CD-Title (OS7 Universal CD)
- Ethernet Cable x1
- Accessory box x1
- HDD Compatibility list Card x1
- Multiple Languages Warranty Card x1
- Power adaptor cable tie x1
- Power adaptor x1
- Power cord x1

N5810/N5810PRO Series/N12850 Series/N16850 Series/N12910/N12910SAS/ N16910SAS

The Thecus IP storage should contain the following common items:

- System Unit x1
- QIG (Quick Installation Guide) x1
- CD-Title (OS7 Universal CD)
- Ethernet Cable x1
- Accessory bag x1
- HDD Compatibility list Card x1
- Multiple Languages Warranty Card x1
- Power cord x1

Please check to see if your package is complete. If you find that some items are missing, contact your dealer.

# N2810

### Front Panel

The Thecus N2810 front panel has the device's controls, indicators, and hard disk trays:

	Front Panel	
	Item	Description
1.	Power	Power on/off N2810.
	Button	
2.	LAN1 LED	Solid white: LAN1 Cable link
		• Blinking : Network activity
3.	LAN2 LED	Solid white: LAN2 Cable link
		• Blinking : Network activity
4.	HDD1 led	• Blinking white: HDD activity
5.	HDD2 led	• Blinking white: HDD activity
6.	USB Copy	Copies USB storage contents to N2810.
	Button	
7.	USB Port	<ul> <li>USB 3.0 port for compatible USB devices, such as digital</li> </ul>
		cameras, USB disks, and USB printers.
8.	HDD Trays	• Two 2.5"/3.5" SATA HDD trays
		<ul> <li>Locks are provided for added security</li> </ul>

The N2810 rear panel features ports and connectors.

Back Panel	
Item	Description
1. LAN2 Port	<ul> <li>LAN2 port for connecting to an Ethernet network through a switch or router</li> </ul>
2. LAN1 Port	WAN/LAN1 port for connecting to an Ethernet network through a switch or router
3. HDMI Port	• For Video/Audio out
4. USB Port	<ul> <li>USB 3.0 port for compatible USB devices, such as digital cameras, USB disks, and USB printers.</li> </ul>
5. Reset Button	Reboot system.
6. Serial Port	<ul> <li>This port has used for debug purpose</li> </ul>
7. Power Connector	• Connect the included power adaptor to this connector.
8. System Fan	<ul> <li>System fan that exhausts heat from the unit.</li> </ul>

# N2810 PRO

#### Front Panel

The Thecus N2810PRO front panel has the device's controls, indicators, and hard disk trays:

	Front Panel	
	Item	Description
1.	Power Button	Power on/off N2810PRO.
2.	LAN1 LED	Solid white: LAN1 Cable link
		• Blinking : Network activity
3.	LAN2 LED	Solid white: LAN2 Cable link
		• Blinking : Network activity
4.	HDD1 led	• Blinking white: HDD activity
5.	HDD2 led	• Blinking white: HDD activity
6.	USB Copy	<ul> <li>Copies USB storage contents to N2810PRO.</li> </ul>
	Button	
7.	USB Port	<ul> <li>USB 3.0 port for compatible USB devices, such as digital</li> </ul>
		cameras, USB disks, and USB printers.
8.	HDD Trays	• Two 2.5"/3.5" SATA HDD trays
		<ul> <li>Locks are provided for added security</li> </ul>

The N2810PRO rear panel features ports and connectors.

Back Panel	
Item	Description
1. LAN2 Port	<ul> <li>LAN2 port for connecting to an Ethernet network through a switch or router</li> </ul>
2. LAN1 Port	<ul> <li>WAN/LAN1 port for connecting to an Ethernet network through a switch or router</li> </ul>
3. HDMI Port	• For Video/Audio out
4. USB Port	<ul> <li>USB 3.0 port for compatible USB devices, such as digital cameras, USB disks, and USB printers.</li> </ul>
5. SPDIF	• For Audio out
6. LocalDisplay Port	• For Video/Audio out
7. Power Connector	• Connect the included power adaptor to this connector.
8. System Fan	<ul> <li>System fan that exhausts heat from the unit.</li> </ul>

# N4810 Series

### **Front Panel**

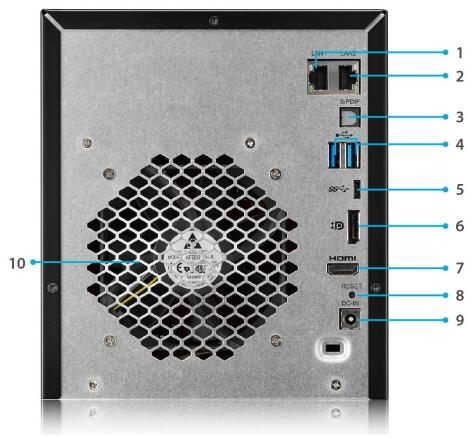

The Thecus N4810 Series front panel has the device's controls, indicators, and hard disk trays:

	Front Panel		
	Item	Description	
1.	Power LED	• Blue: System is power on.	
2.	LAN1 LED	Solid Yellow: LAN1 Cable link	
		• Blinking : Network activity	
3.	LAN2 LED	Solid Yellow: LAN2 Cable link	
		<ul> <li>Blinking : Network activity</li> </ul>	
4.	HDD1 led	Blinking Yellow: HDD activity	
5.	HDD2 led	Blinking Yellow: HDD activity	
6.	HDD3 led	Blinking Yellow: HDD activity	
7.	HDD4 led	Blinking Yellow: HDD activity	
8.	USB Copy	• Blue: Files are being copied from a USB storage device	
	LED	Red: USB copy error	
9.	USB Port	<ul> <li>USB 3.0 port for compatible USB devices, such as digital</li> </ul>	
		cameras, USB disks, and USB printers.	
10.	Power	<ul> <li>Power on/off N4810 Series</li> </ul>	
	Button		
11.	LCD Display	<ul> <li>Displays current system status and warning messages.</li> </ul>	
12.	Up Button 🔺	• Push to scroll up when using the LCD display.	
13.	Down Button	<ul> <li>Push to enter the USB copy operation screen.</li> </ul>	

	•	
14.	Enter Button	<ul> <li>Push to enter LCD administrator password to access basic system setting.</li> </ul>
15.	Escape Button <b>ESC</b>	• Push to leave the current LCD menu.
16.	HDD Trays	<ul> <li>Four 2.5"/3.5" SATA HDD trays</li> <li>Locks are provided for added security</li> </ul>

The N4810 Series rear panel features ports and connectors.

	Back Pane	el
	Item	Description
1.	LAN1 Port	WAN/LAN1 port for connecting to an Ethernet network     through a guitable or resultor
2.	LAN2 Port	<ul> <li>through a switch or router</li> <li>LAN2 port for connecting to an Ethernet network through a switch or router</li> </ul>
3.	SPDIF	For Audio out
4.	USB Port	<ul> <li>USB 3.0 port for compatible USB devices, such as digital cameras, USB disks, and USB printers.</li> </ul>
5.	USB Port (Type-C)	<ul> <li>USB 3.0 (Type-C) port for compatible USB devices, such as digital cameras, USB disks, and USB printers.</li> </ul>
6.	Display Port	For Video/Audio out
7.	HDMI Port	For Video/Audio out
8.	Reset Button	<ul> <li>Resets the N4810 series.</li> <li>Pressing and holding the Reset button on the back for 5 seconds will reset your network setting and password, and turn off Jumbo Frame Support.</li> </ul>
9.	Power Connector	Connect the included power adaptor to this connector.
10.	System Fan	System fan that exhausts heat from the unit.

# N5810/N5810PRO Series

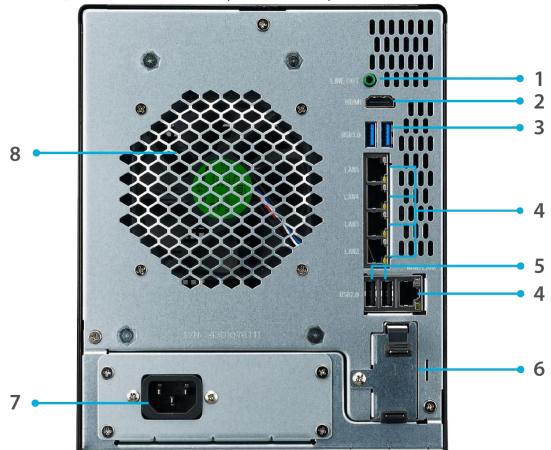

# Front Panel

The Thecus N5810/N5810PRO Series front panel has the device's controls, indicators, and hard disk trays:

Front Panel	
Item	Description
1. Power LED	White: System is power on.
2.WAN/LAN1 LED	White: Network activity
3.LAN2 LED	White: Network activity
4.USB Copy LED	<ul> <li>White: Files are being copied from a USB storage device</li> <li>Red: USB copy error</li> </ul>
5. System LED	<ul> <li>White: System is being upgraded or ; is starting up; data currently inaccessible</li> <li>RED: System error</li> </ul>
6.USB Port	• USB 3.0 port for compatible USB devices, such as USB disks.
7.Power Button	Power on/off N5810/N5810PRO Series and Power LED.
8.Up Button 🔺	• Push to scroll up when using the LCD display.
9.Down Button 🔻	• Push to enter the USB copy operation screen.
10.Enter Button	<ul> <li>Push to enter LCD administrator password to access basic system setting.</li> </ul>
11.Escape Button ESC	<ul> <li>Push to leave the current LCD menu.</li> </ul>
12.LCD Display	<ul> <li>Displays current system status and warning messages.</li> </ul>
13.HDD Trays	• Five 3.5" SATA HDD trays.
	<ul> <li>Locks are provided for added security.</li> </ul>

The N5810/N5810PRO Series rear panel features ports and connectors.

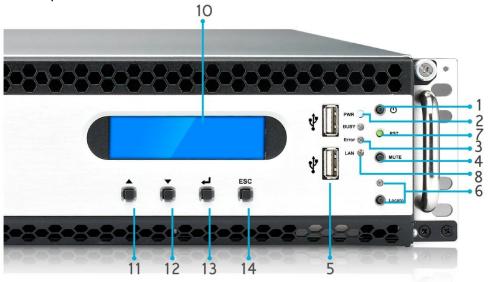

Back Panel	
Item	Description
1. Line out	• For Audio out
2.HDMI Port	• For Video/Audio out
3.USB Port	<ul> <li>USB 3.0 port for compatible USB devices, such as USB disks, and USB printers</li> </ul>
4. WAN/LAN1/	WAN/LAN1/LAN2/LAN3/LAN4/LAN5 port for connecting to
LAN2/LAN3/LAN4/LAN	an Ethernet network through a switch or router
5 Port	
5.USB Port	<ul> <li>USB 2.0 port for compatible USB devices.</li> </ul>
6.UPS Battery slot	For UPS Battery
(N5810PRO)	
7.Power Connector	<ul> <li>Connect the included power cords to these connectors</li> </ul>
8.System Fan	<ul> <li>System fan that exhausts heat from the unit.</li> </ul>

# N12850:

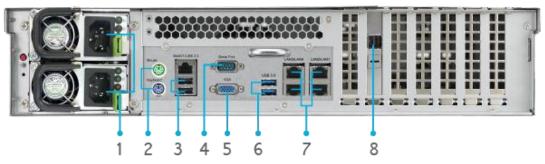

# Front Panel

The Thecus N12850 front panel has the device's controls, indicators, and hard disk trays:

Front Pane	
Item	Description
1.Power Button	Power on/off N12850
2.Power LED	Solid green: System is power on.
3.System error LED	• Solid RED: System error.
4.Mute button	Mute the system fan alarm.
5.USB Port	<ul> <li>USB 2.0 port for compatible USB devices, such as USB disks and USB printers</li> </ul>
6. Locator button /	• Press the button, the back led will light up to identify the system
LED	position of the rack
7. RST	Reboot system.
8. LAN	<ul> <li>Blinking green: network activity</li> </ul>
	Solid green: network link
9. BUSY	<ul> <li>Blinking orange: system startup or system maintenance; data currently inaccessible</li> </ul>
10.LCD	<ul> <li>Displays current system status and messages</li> </ul>
	• LCD screen saver will be enabled after screen is idle for more
	than 3 minutes
	<ul> <li>LCD screen will be turn off after idle for more than 6 minutes</li> </ul>
11.Up Button ▲	<ul> <li>Push to scroll up when using the OLED display</li> </ul>
12.Down Button ▼	<ul> <li>Push to enter USB copy operation screen</li> </ul>
13.Enter Button ↓	• Push to enter OLED operate password for basic system setting
14.Escape Button ESC	Push to leave the current OLED menu

N12850 rear panel features ports and connectors.

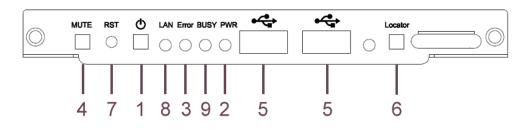

Back Panel					
Item	Description				
1.Power Connector	<ul> <li>Connect the included power cords to these connectors</li> </ul>				
2. PS/2 connector	<ul> <li>The color-coded PS/2 connection ports (purple for keyboard and green for mouse)</li> </ul>

# **Chapter 2: Hardware Installation**

# Overview

Your Thecus IP storage is designed for easy installation. To help you get started, the following chapter will help you quickly get your Thecus IP storage up and running. Please read it carefully to prevent damaging your unit during installation.

# **Before You Begin**

Before you begin, be sure to take the following precautions:

- 1. Read and understand the **Safety Warnings** outlined in the beginning of the manual.
- 2. If possible, wear an anti-static wrist strap during installation to prevent static discharge from damaging the sensitive electronic components on the Thecus IP storage.
- 3. Be careful not to use magnetized screwdrivers around the Thecus IP storage's electronic components.

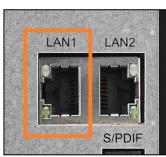

# **Cable Connections**

To connect the Thecus IP storage product to your network, follow the steps below:

1. Connect an Ethernet cable from your network to the WAN/LAN1 port on the back panel of the Thecus IP storage.

▲ N2810 Series/ N4810 Series WAN/LAN1 port

▲ N4810 Series WAN/LAN1 port

▲ N5810/N5810PRO Series WAN/LAN1 port

N12910/;N12910SAS/N16910 SAS WAN/LAN1 port

2. Connect the provided power adaptor and power cord into the power socket on the back panel. Plug the other end of the cord into a surge protector socket.

▲ N2810 Series /N4810 Series power socket

▲ N5810/N5810PRO Series power socket

▲N12910N12910SAS//N16910 SAS power socket

▲N4810 Series power socket

3. Press the power button on the Front Panel to boot up the Thecus IP storage.

- ▲ N2810 Series power button
- ▲ N5810/N5810PRO Series power button

# **Chapter 3: First Time Setup**

### Overview

Once the hardware is installed, physically connected to your network, and powered on, you can configure the Thecus IP storage so that it is accessible to your network users. There are two ways to set up your Thecus IP storage: using the **Thecus Setup Wizard** or the **LCD display (Depend on models)**. Follow the steps below for initial software setup.

# **Thecus Setup Wizard**

The handy Thecus Setup Wizard makes configuring Thecus IP storage a snap. To configure the Thecus IP storage using the Setup Wizard, perform the following steps:

- 1. Insert the installation CD into your CD-ROM drive (the host PC must be connected to the network).
- 2. The Setup Wizard should launch automatically. If not, please browse your CD-ROM drive and double click on **Setup.exe.**

3. The Setup Wizard will start and automatically detect all Thecus storage devices on your network. If none are found, please check your connection and refer to **Chapter 7: Troubleshooting** for assistance.

Device Discovery	Device Discovery				Version: 2.0

NOTE

The Thecus Setup Wizard is designed for installation on systems running Windows XP/2000/vista/7/8/10 or Mac OSX or later. Users with other operating systems will need to install the Thecus Setup Wizard on a host machine with one of these operating systems before using the unit.

# Typical Setup Procedure

From the Web Administration Interface, you can begin to setup your Thecus IP storage for use on your network. Setting up the Thecus IP storage typically follows the five steps outlined below.

### **Step 1: Network Setup**

From the Web Administration Interface, you can configure the network settings of the Thecus IP storage for your network. You can access the **Network** menu from the control panel.

### **Step 2: RAID Creation**

Next, administrators can configure their preferred RAID setting and build their RAID volume. You can access RAID settings from the control panel of the Web Administration Interface by navigating to **Storage Management > Disk and RAID**.

### **Step 3: Create Local Users or Setup Authentication**

Once the RAID is ready, you can begin to create local users for Thecus IP storage, or choose to setup authentication protocols such as Active Directory (AD).

### Step 4: Create Folders and Set Up ACLs

Once users are introduced into your network, you can begin to create various folders on the Thecus IP storage and control user access to each using Folder Access Control Lists.

### **Step 5: Start Services**

Finally, you can start to setup the different services of Thecus IP storage for the users on your network.

# **Chapter 4: System Administration**

### **Overview**

The Thecus IP storage provides an easily accessible **Web Administration Interface**. With it, you can configure and monitor the Thecus IP storage anywhere on the network.

# Web Administration Interface

Make sure your network is connected to the Internet. To access Thecus IP storage **Web Administration Interface**:

1. Type the Thecus IP storage IP address into your browser. (Default IP address is <a href="http://192.168.1.100">http://192.168.1.100</a>)

Thecu	sOS™ 7.0	0
V	Velcome	
	r Google Chrome. 5 resolution: 1280 x 1024	

2. Login to the system using the administrator user name and password. The factory defaults are:

#### User Name: admin Password: admin

% If you changed your password in the setup wizard, use the new password.

Once you are logged in as an administrator, the disclaimer page will appear as below. Please click the check box if you do not want to have this page displayed during the next login.

isclaimer	
THECUS has no liability, consequential, incidental or special damages. These include, without limitation, loss of recorded data, the cost of recovery of lost data, lost profits and the cost of the installation or removal of any THECUS products, the installation of replacement THECUS products, and any inspection, testing, or redesign caused by any defect or by the repair or replacement of Products arising from a defect in any THECUS products.	
Users can now register their THECUS NAS online. Simply go to the online registration feature and enable the registration function. The registration page will confirm what system information will be stored. Users will receive regular firmware upgrades and module release notifications.	
I agree. Don't show this message next time.	
OK	

Following the disclaimer page, you will see the **Web Administration Interface**. From here, you can configure and monitor virtually every aspect of the Thecus IP storage from anywhere on the network.

#### Menu Tree

The **Menu Tree** is where you will find all of the information screens and system settings of Thecus IP storage. The various settings are placed in the following groups on the menu bar.

Menu Bar	
Item	Description
Control Panel	The Entry of system and function setting
App Center	The entry of App Center
File Center	The entry of File Center

Moving your cursor over any of these items and click, it will display the associated screen for each topic.

#### Add/Remove Shortcut

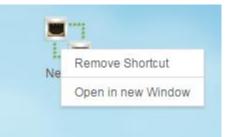

The user interface allows the user to designate often used items and have them display on the main screen area by add Shortcut. The figure below displays system favorite functions.

Administrators can add or remove Shortcut by right clicking the mouse and selecting "Add Shortcut" icon in each function screen. See the figure below with the red circled icon.

CONTROL			
		i	
Log &	Power &	Add Shortcut	letwork
Notification	Hardwar	Open in new Window	

To remove "Shortcut" from main screen, right click the mouse button and select "Remove Shortcut".

### **Open in New Window**

To open associated function on the front of screen, right click mouse and select "Open in new window".

In the following sections, you will find detailed explanations of each function, and how to configure your Thecus IP storage.

### Feedback for OS7.0

On the top right hand corner of menu bar, click on sending screen, please provide your feedback.

### **Quick System Log Info**

On the top right hand corner of the menu bar, click on the system log info.

Click Apply to save changes.

### **Power Schedule**

Using the Thecus IP storage Power Management, you can save energy and money by scheduling the Thecus IP storage to turn itself on and off during certain times of the day.

To designate a schedule for the Thecus IP storage to turn on and off, first enable the feature by checking the **Enable Power Schedule** checkbox.

Then, click **Add** to add desired time for system power on or off.

Finally, click **Apply** to save your changes.

#### Power Schedule

Add	wer Schedule		
Status	Action	Time	Period
Status	Action	Time	Period
Apply			

#### Example - Monday: On: 8:00; Off: 16:00

System will turn on at 8:00 AM on Monday, and off at 16:00 on Monday. System will turn on for the rest of the week.

If you choose an on time, but do not assign an off time, the system will turn on and remain on until a scheduled off time is reached, or if the unit is shutdown manually.

#### Example - Monday: On: 8:00

System will turn on at 8:00 AM on Monday, and will not shut down unless powered down manually.

You may also choose two on times or two off times on a particular day, and the system will act accordingly.

#### Example - Monday: Off: 8:00; Off: 16:00

System will turn off at 8:00 AM on Monday. System will turn off at 16:00 PM on Monday, if it was on. If the system was already off at 16:00 PM on Monday, system will stay off.

### Wake-On-LAN

The Thecus IP storage has the ability to be awoken from sleep mode via WAN/LAN1 or LAN2 port.

Wake-On-LAN

Enable WAN/LAN1
Enable LAN2
Apply

Click on associated NIC interface to Enable or Disable Wake-On-LAN.

Wake-up On LAN Configuration		
Item	Description

### **Network Setting**

#### WAN/LAN Setting:

The available system network ports are coming from embedded system ports. Therefore, the screen shown above is an example of a Thecus N5810 with 2 on board GbE NIC.

To modify port setting, please click on **Edit** with the associated network port. The setting screen will appear, it can be configured for basic setting, DHCP server and VLAN.

#### Basic Setting:

Settings	DHCPS	Server	VLAN					
	MAC Addre 00:14:fd:17				Current	IP:	172	2.16.65.164
	Device Spe	ed:		1000 Mb/s	Jumbo F	rame:	1500	•

	GateWay	192.168.0.112		GateWay	Please Input IPv6 Gat	

## **Quality of Service**

Thecus IP storage is capable for QoS (Quality of Service) by supported services. The bandwidth will give by the order from QoS list once the overall bandwidth required is larger than the physical number.

Add						
Ena	Network Interface	Service	Protocol	Ports	Guaranteed (K	Maximum (KB/s)
Yes	WAN/LAN1	Samba	TCP	139,445	50000	1000000
Yes	WAN/LAN1	AFP	TCP	548	3000	500000

To setup QoS, simply Enable QoS and then click 'Add" on QoS screen. The screen will appear as below.

Quality of S	ervice Configuration
Enable the Rule	Checked the box to enable defined rule.
Network Interface	Select network interface from drop down list.
Service List	Select desired service to have QoS served
User Defined	Other than pre-defined service list, user defined service is allowed.
Service Name	Input user defined service name
Protocol and Ports	Input user defined protocol from drop down list and associated ports will be used
Protocol	List associated protocol of selected service.
Ports	List associated port number of selected service.
Guaranteed (KB/s)	Input MUST of throughput for associated service.
Maximum (KB/s)	Input maximum of throughput for associated service

To modify, delete or change priority of created QoS service, select desired service from service list then click required activities. Carry on for necessary modification to modify by click "Edit" or click on "Move Up" or "Move Down" to change priority. The Delete the rule button can be found on left hand bottom corner after go into "Edit" screen.

1	Enable (	20S					
	Add	Edit Move Up	Move Down				
	Ena	Network Interface	Service	Protocol	Ports	Guaranteed (K	Maximum (KB/s)
	Yes	WAN/LAN1	Samba	TCP	139,445	50000	1000000
	Yes	WAN/LAN1	AFP	TCP	548	3000	500000

# DDNS

#### DDNS Support:

To set up a server on the Internet and enable the users to connect to it easily, a fixed and easy-to remember host name is often required. However, if the ISP provides only dynamic IP address, the IP address of the server will change from time to time and is difficult to recall. You can enable the DDNS service to solve the problem.

After enabling the DDNS service of the NAS, whenever the NAS restarts or the IP address is changed, the NAS will notify the DDNS provider immediately to record the new IP address. When the user tries to connect to the NAS by the host name, the DDNS will transfer the recorded IP address to the user.

The NAS supports the DDNS providers:

DyDNS.org(Dynamic DNS),DyDNS.org(Custom DNS),DyDNS.org(Static DNS), www.zoneedit.com,www.no-ip.com.

A description for each item as following:

DDNS	
Item	Description
DDNS Service	Enable or disable DDNS service.
Register	Choose the service provider from the drop down list
User name	Input user name with DDNS registry.
Password	Input password with DDNS registry.
Domain name	Input domain name with DDNS registry.
Apply	Click "Apply" to confirm the changes.

#### DDNS Support

Model	Displays the model of the USB printer.	
Printer job in Queue	Displays the print job in queue of the USB printer.	

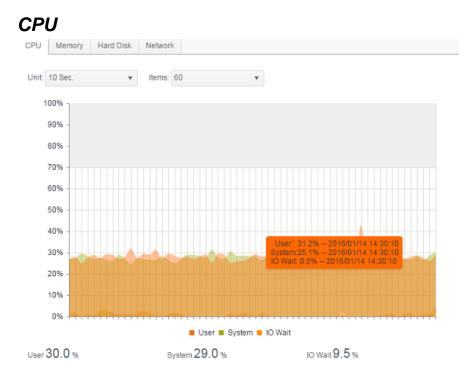

You can configure Thecus IP storage to act as a printer server. That way, all PCs connected to the network can utilize the same printer.

• For example to setup attached USB printer on your Windows 7 environment. Please use http:// <nas address="" ip="">:631/printers/printer name The default printer name is usb-printer or use the one has been</nas>
---

### Monitor

The system monitor is capable to monitor system status including CPU, memory, hard disk and network.

To monitor system status, simply click on tab of associated item and the screen will appear accordingly.

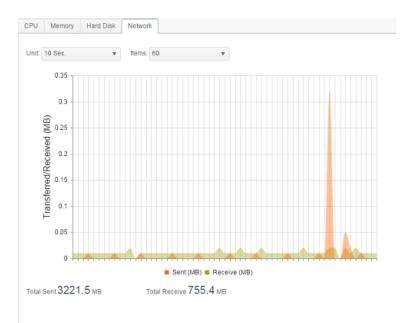

### Memory

# Hard Disk

## Network

### **Firmware Setting**

## Firmware Setting

From the menu, choose the *Firmware Setting* item and the *Firmware Setting* screen appears.

#### Firmware Upgrade

Please select the upgr	Please select the upgraded firmware file:			
	deen film have to unland			
Select	drop files here to upload			

Follow the steps below to upgrade your firmware:

- 1. Click the **Select** button to find the firmware file.
- 2. System will check correctness of selected file and carry on for upgrade process .
- 3. The buzzer will beep and the Busy LED will blink until the upgrade is complete.

ΝΟΤΕ	<ul> <li>Check Thecus website for the latest firmware release and release notes.</li> <li>Downgrading firmware is not permitted.</li> </ul>
WARNING	Do not turns off the system during the firmware upgrade process. This will lead to a catastrophic result that may render the system inoperable.

## **Configuration Management**

The **System Configuration Management** is to let you to download or upload stored system configurations.

#### **Configuration Management**

Please select the restored configuration file:				
	Select	drop files here to upload		

Backup

#### See the following table for a detailed description of each item.

System Configuration Management		
Item	Description	
Backup	Save and export the current system configuration.	
Select	Import a saved configuration file to overwrite the current system configuration.	

ΝΟΤΕ	Backing up your system configuration is a great way to ensure that you can
	revert to a working configuration when you are experimenting with new system settings.
	Settings. The system configuration you have backed up can only be restored in the same
	firmware version. The backup details exclude user/group accounts.

## Automatic Upgrade

The system is defaulted to enable **Major** upgrade mode for any MUST update. It also provides the option for **Latest** upgrade mode, which has **Major** upgrade included but also most updated fixes and latest functions.

Click on **Check Upgrade Now** can let you find out the latest FW version.

Automatic Up	grade
Automatica	ally upgrade firmware when new version is available.
Major	Latest
Apply	Check Upgrade Now

### Reset to Default

In any case the system needs to set back to factory default, click on **Apply** on **Reset to Default** section to reset Thecus IP storage to factory default settings.

	Unix / Linux System
	<ul> <li>AIX (Allow source port &gt; 1024)</li> </ul>
	Choose the one which best fits your needs.
ID Mapping	There are three selections available:
	<ul> <li>Guest system root account will have full access to this share (root:root).</li> </ul>
	<ul> <li>Guest system root account will be mapped to</li> </ul>
	anonymous user (nobody:nogroup) on NAS.
	<ul> <li>All user on guest system will be mapped to anonymous user (nobody:nogroup) on NAS.</li> </ul>
	Choose the one which best fits your needs.
Sync / Async	Choose to determine the data "Sync" at once or "Async" in
	arranged batch.
Apply	Click to save your changes.

# Modify/Remove Folders

On the existed **Folder** list, click on desired **Folder** then the associated menu items will appear.

Shared F	older					
Create	Edit & ACL	SnapShot				
Folder Na	ime		Location	File Sy	Public	Description
Public			KendoR0	btrfs	Yes	
PM			KendoR0	birts	Yes	For PM Department
PM_ACL			KendoR0	btrfs	No	Authentication Required
iSCSI_ker	ndoui		KendoR0	btrfs	No	iSCSI Target Folder

NOTE	The Snapshot item will appear only if:
NOTE	3. The system RAID volume is selected btrfs file system.
	4. The folder is user created not system default.

Edit & ACL:

Click on the **Edit & ACL** buttons, there are five sub-items related folder modification that can be choose if the associated folder has ACL defined. Or ACL related tabs won't appear and it is known as public folder.

#### **General Settings:**

The only item can't be changed is folder belonging with associated RAID volume. With others, make any changes if required.

dit					:

## Snapshot

Previous

Snapshot (Btrfs file system only):

SMB and enterprise Thecus IP storage systems are now capable of saving 16 snapshot versions of files and folders. For Snapshot to function, a "BTRFS" file system is required.

		21
RAID Name	Rjbod	
Stripe Size:	64	*
File System	BTRFS	
Set as Master RAID	EXT4	
	EXT3	
Encryption	BTRFS	
	XFS	

Cancel

Any folder using a "BTRFS" file system is capable of being included in the Snapshot function. In the "Share Folder" submenu, the Snapshot button is available in the tool bar.

Shared Folder					
Create Edit & ACL	SnapShot				
Folder Name	Create	File Sy	Public	Description	Quota Limit
Snapshot	KendoR5	btrfs	No		*
Public	KendoR5	btrfs	Yes		*
HOME	KendoR5	btrfs	Yes		*
eSATAHDD	KendoR5	btrfs	Yes		
USBHDD	KendoR5	btrfs	Yes		*

#### Taking a Snapshot

Click on the **Snapshot** button. The management screen will then appear as below for the associated folder.

napshot List	and Schedule				
Snapshot List	Schedule				
Take Snapsho	ot				
Snapshot					

To manually take a Snapshot, simply click **Take Snapshot** and the Snapshot history will be listed. It can store up to 16 versions.

Snapshot List	and Schedule[PMTeam]		×
Snapshot List	Schedule		
Take Snapshot			
Snapshot			
2015-11-18 15:4	7:58		
			Apply Cancel

To locate where the Snapshot files or folders are stored, please browse to \\System\_IP\snapshot. Please note that you will need to have the relevant folder permissions enabled for your account. Besides manual Snapshots, this feature also allows for scheduled backups. Click on **Schedule** and the setup screen will appear. Check "Enable Snapshot Schedule" and select the desired Snapshot interval. Options include Daily, Weekly, or Monthly.

Since files and folders are limited to 16 Snapshots versions, the "Auto Delete Old Snapshot" option allows for the removal of the oldest version automatically once the limit is reached.

napshot List and Schedule[PM	Team]			
Snapshot List Schedule				
Enable Schedule	Disable	۲	Enable	
Auto Delete Old Snapshot	No	۲	Yes	
Schedule Rule	Monthly	v 1. v	Day 0 🔻 Hour	
				Apply Cano

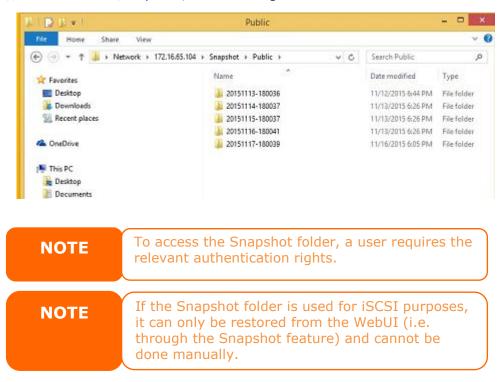

#### **Snapshot Restore**

To restore a Snapshot, simply select the desired version from list and click "Restore Snapshot". Once the restore confirmation has been made, the selected Snapshot will overwrite the current associated file or folder.

Snapshot List and Schedule[PMTeam]	;
Snapshot List Schedule	
Take Snapshot Restore Snapshot Delete Snapshot	
Snapshot	
2015-11-18 15:47:58	
2015-11-18 15:59:41	
	Apply Cance
	Apply Caller

The other way to restore a recorded Snapshot version is manually by browsing to the "Snapshot" folder via SAMBA (\\System\_IP\snapshot). All Snapshot versions are stored here, and you can copy or paste to restore a version manually.

For example, the NAS system at 172.16.65.104 has a folder named "Public" with a Snapshot version backed up. If the user were to browse to \\172.16.65.104\Snapshot, the following details would be visible:

#### **Snapshot Removal**

To remove a Snapshot, simply select the desired version from list and click "Delete Snapshot".

Snapshot List and Schedule[Public]		×

	Apply	Cancel

## **Local Account**

The Thecus IP storage has built-in user database that allows administrators to manage user access using different group policies. From the **Privilege** menu of **Local Account**, you can create, modify, and delete users, and assign them to groups that you designate.

Control       Refresh       Create       Batch Input         ** Shared Folder       User ID       User Name       Description       Admin       Last Login       User Quota       User Type         ** Shared Folder       1000       pm1       Description       Admin       Last Login       User Quota       User Type         ** Local Account       1000       pm1       Income       No       2015-07-20 17:57:17.025695        Local User         ** LOAP       1001       pm2       Income       No       2015-07-20 17:57:17.438933        Local User         Storage       1002       pm4       PM team member       No       2015-07-24 18:18:14.091975        Local User         Backup       1003       pm3       PM team Member       No       2015-07-24 17:43:25.203073       100.0 GB       Local User         1004       pm5       PM team Member       No       2015-07-24 18:18:14.682774       100.0 MB       Local User         1005       pm6       PM team       No       2015-07-24 18:18:14.682774       100.0 MB       Local User	Function Search Q	User Gr	oup User Quota	Backup & Restore

-	allow using batch input of local users.	

#### Create User:

On the **User** screen, press the **Create** button and the **Create User** screen appears. Follow the wizard and system will lead you to complete the setting.

- 1. Enter a **User ID** number or leave it to use the system default value.
- 2. Tick on check box if this can be acted as administrator.
- 3. On the **Account ID** field, enter a name for the **User**.
- 4. Enter a **User ID** number or leave blank to use the system default value.
- 5. Enter a password in the **Password** box and re-enter the password in the **Confirm** box.
- 6. Input the user description
- 7. Input user's mail address
- 8. Input user quota or leave it as default for no limitation.
- 9. Press the **Next** button to next page.

## <u>Batch Input:</u>

The Thecus IP storage can also add users and groups in batch mode. This enables you to conveniently add numerous users and groups automatically by importing a simple Microsoft Excel (\*.csv) file.

From the **User** menu, click **Batch Input** and the **Batch User Input Creation** dialogue will appear. To import your list of users and groups, follow these steps:

- 1. Click on the **Select** button to locate your Excel (.csv) file.
- 2. Click **Confirm Batch Input** to confirm import.
- 3. Or on the left bottom corner can download sample file to manipulate.

# User Quota (Btrfs not support)

The Thecus IP storage support local or AD users with storage quota limitations in each RAID volume of the system. To enable this function, simply click "Enable", then apply.

It can click on Start Scan button to have most update of quota usage for every user and associated RAID volumes.

# Backup & Restore

## User and group settings download/upload:

The user and group backup feature allow system users and groups to be backed up to another location and be restored if needed.

Please note, when restoring previous backup users and groups, the current users and groups list will be replaced from this restore file's contents.

User	Group	User Quota	Backup & Restore	
Us	er and g	group setting	s download/uplo	ad
	Please r	hoose a file to u	bload	
	,		pioau	
		Select	drop files here to up	load
	l			
	Downk	bad		
	Downik	Jau		

## ACL backup/restore

The ACL backup and restore feature enables the system ACL (Access Control List) to be backed up on the RAID volume based to other location and restored if needed.

RAID ID:	KendoR0 v		
Select File	to Restore drop files here to uplo	ad	
Gelect File	IO RESIDIE		

# ADS

If you have a Windows Active Directory Server (ADS) to handle the domain security in your network, you can simply enable the ADS support feature; the Thecus IP storage will connect with the ADS server and get all the information of the domain users and groups automatically. From the **Privilege** menu, choose **ADS** item and the **ADS Setting** screen appears. You can change any of these items and press **Apply** to confirm your settings.

Setting Panel		• ×
Function Search Q	ADS Setting	
Control	•	
Privilege	<ul> <li>Active Directory (AD)</li> </ul>	
E Shared Folder		
🎎 Local Account	Enable AD Service

#### Create a RAID

On the **RAID Information** screen, press the **Create** button to go to the **RAID Volume Creation** screen. In addition to RAID disk information and status, this screen lets you make RAID configuration settings.

Using  $\mbox{Create RAID},$  you can select stripe size, choose which disks are RAID disks or the Spare Disk. .

RAID Configu	rations
Item	Description
Disk .	Number assigned to the installed hard disks.
Capacity (MB)	Capacity of the installed hard disks.
Model	Model number of the installed hard disks.
Status	Status of the installed hard disks.
Used	If this is checked, current hard disk is aalready part of a RAID volume.
Spare	If this is checked, current hard disk is designated as a spare for a RAID volume.
Master RAID	Check a box to designate this as the Master RAID volume. See the <b>NOTE</b> below for more information.
Stripe Size	This sets the stripe size to maximize performance of sequential files in a storage volume. Keep the 64K setting unless you require a special file storage layout in the storage volume. A larger stripe size is better for large files.
Data Percentage	The percentage of the RAID volume that will be used to store data.
Create	Press this button to configure a file system and create the RAID storage volume.

To create a RAID volume, follow the steps below:

1. On the **Select Disk** screen, select available disks for the RAID volume member(s).

 Set the RAID storage space as JBOD, RAID 0, RAID 1, RAID 5, RAID 6, RAID 10, RAID 50 and RAID 60 (depends on how many disks has installed into system)— see Appendix B: RAID Basics for a detailed description of each.

Choose the type		
JBOD		
RAID 0		
RAID 1		
RAID 5		5589.05 GB
	Data Storage Space:	5589.05 GB
	Redundancy Space:	0 KB
	Unused Space:	0 KB
	Note: The data space is only e	estimated

3. Choose spare disk for associated RAID volume if applicable.

1 1.8 TB	
1 1.8 TB	
- 1.8 TB	
	1.8 18
3 1.8 TB	1.8 TB
2 4 1.8 TB	1.8 TB
5 1.8 TB	1.8 TB
2222	

4. Specify a RAID Name.

	KendoR5	RAID Name
*	64	Stripe Size:
*	BTRFS	File System
		Set as Master RAID
		Quick RAID
		Encryption
		Quick RAID

5. If this RAID volume is meant to be the Master RAID volume, tick the **Master RAID** checkbox.

RAID Name	KendoR5			
Stripe Size:	64			
File System	BTRFS	Ŧ		
Set as Master RAID	EXT4 EXT3			
Quick RAID	BTRFS			
Encryption	XFS			

In a multiple RAID configuration, one RAID volume must be designated as the Master RAID volume. The Master RAID volume will store all installed modules. If the Master RAID is changed to another location (i.e. assigning volume 2 to be the Master RAID volume after volume 1 had been previously assigned), then all modules must be reinstalled. In addition, all system folders that were contained on the Master RAID volume will be invisible. Reassigning this volume to be the Master RAID will make these folders visible again.

6. Selected whether the RAID volume will be encrypted or not. The RAID volume can protect data by using RAID Volume Encryption function to prevent the risk of data exposure. To activate this function, the **Encryption** option needs to be enabled while the RAID is created and followed by a password input for identification. Also, an external writable USB disk plugged into any USB port on the system is required to save the password you have entered while the RAID volume is being created. See the screenshot below for details.

RAID Name	Please Input Raid Name
Stripe Size	64 <b>v</b>
File System	EXT4 v
Byte per inode:	Auto 💌
Set as Master RAID	
Guick RAID	
<ul> <li>Encryption</li> </ul>	Please Input Password Here Please Confirm Password Here

After the RAID volume has been created, you may remove the USB disk until the next time the system boots. The RAID volume cannot be mounted if the USB disk with the encryption key isn't found in any system USB port when the volume is accessed. To activate the encrypted volume, plug the USB disk containing the encryption key and into any system USB port.

We strongly recommended copying the RAID volume encryption key to a safe place. You can find the encryption key file from the USB disk in the following format:

(RAID volume created date)\_xxxxxx.key

RAID volumes with encryption enabled will be displayed with a key lock symbol next to volume ID name.

RAID N	Status	Level	Disk	Capacity	File S	FSCK T	FSCK Status
m KendoR5	Create Folder	RAID5	1, 3, 2(4)	0.02% 0.74GB/3721.00	btrfs		
€ EncryptRAI[	Format Data	JBOD	5		ext4		

7. Quick RAID — Enabling the quick RAID setting is going to enhance RAID creation time.

tail Settings se fill up the detail settings and RAID Name En Stripe Size: 64 File System EX Byte per inode: Aut	icrypdRAID T	create raid	2

TE We recomm	end using the	e "Quick	RAID″ se	etting only if t	he hard dis

- 8. Specify a stripe size 64K is the default setting.
- 9. Specify size for "Bytes per inode" if ext3/ext4 has selected. The default value is Auto and it has no need to change for general use.
- 10. Select the file system you would like to have for this RAID volume. The selection is available from ext3, XFS, ext4 and btrfs.

F	ile System	EXT4 v
В	yte per inode:	EXT4
2	jo por modo.	EXT3
	Set as Master RAID	BTRFS
	Quick RAID	XFS

Encryption

## 11. Press *Create Finished* to build the RAID storage volume.

ΝΟΤΕ	Building a RAID volume may be time consuming, depending on the size of hard drives and RAID mode. In general, if the RAID volume building process is up to "RAID Building", then the data volume is accessible.
WARNING	Creating RAID destroys all data in the current RAID volume. The data will be unrecoverable.

## **RAID Level**

You can set the storage volume as **JBOD**, **RAID 0**, **RAID 1**, **RAID 5**, **RAID 6**, **RAID 10**, **RAID 50** and **RAID 60** (Depend on Model and how many disks has been installed).

Level	JBOD	RAID 0	RAID 1	RAID 5	RAID 6	RAID 10	RAID 50	RAID 60
Model								
N2810 series	•	•	•					
N4810 series	•	•	•	•	•	•		
N4910U series	•	•	•	•	•	•		
N5810 series	•	•	•	•	•	•		
N12850 series	•	•	•	•	•	•	•	•
N12910/N12910SAS	•	•	•	•	•	•	•	•
N16850 series	•	•	•	•	•	•	•	•
N16910SAS	•	•	•	•	•	•	•	•

N8910 series	•	•	•	•	•	•	•	•
N0910 Series	•	•	•	•	•	•	•	•

RAID configuration is usually required only when you first set up the device. A brief description of each RAID setting follows:

RAID Levels	
Level	Description
JBOD	The storage volume is a single HDD with no RAID support. JBOD requires a minimum of 1 disk.
RAID 0	Provides data striping but no redundancy. Improves performance but not data safety. RAID 0 requires a minimum of 2 disks.
RAID 1	Offers disk mirroring. Provides twice the read rate of single disks, but same write rate. RAID 1 requires a minimum of 2 disks.
RAID 5	Data striping and stripe error correction information provided. RAID 5 requires a minimum of 3 disks. RAID 5 can sustain one failed disk.
RAID 6	Two independent parity computations must be used in order to provide protection against double disk failure. Two different algorithms are employed to achieve this purpose. RAID 6 requires a minimum of 4 disks. RAID 6 can sustain two failed disks.
RAID 10	RAID 10 has high reliability and high performance. RAID 10 is implemented as a striped array whose segments are RAID 1 arrays. It has the fault tolerance of RAID 1 and the performance of RAID 0. RAID 10 requires 4 disks. RAID 10 can sustain two failed disks.
RAID 50	RAID 50 combines the straight block-level striping of RAID 0 with the distributed parity of RAID 5. This is a RAID 0 array striped across RAID 5 elements. It requires at least 6 drives.
RAID 60	RAID 60 combines the straight block-level striping of RAID 0 with the distributed double parity of RAID 6. That is, a RAID 0 array striped across RAID 6 elements. It requires at least 8 disks.

WARNING

If the administrator improperly removes a hard disk that should not be removed when RAID status is degraded, all data will be lost.

## Edit RAID

- 1. Select an existing RAID volume from the list.
- 2. Click on the *Edit* button, and the **RAID volume setting** screen appears.
- 3. Making the changes such as RAID name or role of master RAID if needed.

Raid Manager - Edit Raid			×
Information Grow			
Basic Information			
RAID Name	KendoRS	Set as Master RAID	
Level	RAID5		
Disk	1, 3, 2(4)		
Size	3721.00 GB		
Remove RAID		Apply	Cancel

#### **Remove RAID**

- 1. Select an existing RAID volume from the list.
- 2. Click on the **Remove RAID** button from left bottom corner, A confirmation screen will appear.
- 3. Confirm with click "OK" to complete the "**Remove RAID**" operation.

Click to remove the RAID volume. All user data and iSCSI created in the selected RAID volume will be deleted.

WARNING	Remove RAID destroys all data in the selected RAID volume. The data will be unrecoverable.
	will be unrecoverable.

## Expanding a RAID

To expand a RAID 1, RAID 5, or RAID 6 volume, follow the steps below:

- 1. Replace one of the hard drives in the RAID volume and allow it to automatically rebuild.
- Once rebuilt, you can continue to replace any remaining disks in the RAID array.
- When you are done replacing hard drives, click on RAID volume that is going to expand capacity. System will have additional tab "Space Expansion" appear if associated RAID volume is capable for expansion.
- 4. On the **RAID Configuration** screen, click **Space Expansion**.

RAID	Disk	Spin	Down	Self Er	сгур	otion Drive			
Create	Edit	File	System (	Check	Sp	ace Expansion			
RAID N	. Stat	tus	Level	Disk		Capacity	File S	FSCK Time	FSC
🕝 RAID	Hea	althy	RAID1	1, 2		0.47% 4.29GB/914.29GB	ext4		

### File System Check

The File System Check allows you to perform a check on the integrity of your disks' file system.

To perform File System Check, select RAID volume from RAID Volume list and the tab **File System Check** will appear. Click on **File System Check** button to start the task. From the screen, it will display FSCK check time and checking status.

RAID	Disk	Spin	Down	Self Encry	ption Drive

## Migrating a RAID

Once a RAID volume has been created, you may want to move it to other physical drives or change the RAID array all together. To migrate a RAID 1, RAID 5 or RAID 6 volume, follow the steps below:

- 1. Select RAID volume which is going to execute **RAID Migration.**
- 2. Press Edit to bring up management screen.
- 3. Choose **Grow** to have all installed disks listed included used and unused.

laid Manage	 10			,
nformation		Disk in Use Chosen Disk Unused Disk	1         1.8TB           2         3.6TB           3         1.8TB           4         1.8TB           5         1.8TB	
				OK Cance
			Q1	All and a second se

4. Select from unused disk then click **OK**, the system will bring up available options to choose from.

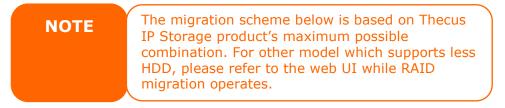

5. Confirm the setting, then system will begin migrate the RAID volume.

Here is a list of limitation with RAID level migration function:

- 1. During RAID level migration, it is not permitted to reboot or shutdown system.
- For RAID migration from R1 to R5 or R1 to R6, all services will restart and "iSCSI" volume will be in read only mode but read/write of the "user data" will be possible during the operation.

Below is a table listing of possible RAID migration schemes:

То			
From	RAID 0	RAID 5	RAID 6

1	I	1	1 1
RAID		[RAID 1] HDDx2 to [RAID 5] HDDx3	[RAID 1] HDDx2 to [RAID 6] HDDx4

4	WDC WD20EFRX-68E	1863 GB	82.0	RAID	
5	WDC WD20EFRX-68E	1863 GB	80.0	Unused	Scanning 1 %

# <u>S.M.A.R.T :</u>

- 1. Select a disk from the list.
- 2. Click on *S.M.A.R.T.* tab to perform.

Once clicking on S.M.A.R.T., system will display the basic hard disk information and status. Based on S.M.A.R.T. status, system will give the healthy condition for reference. Please see below for details.

S.M.A.R.T. Information					
Item	Description				
Model	Model name of the installed hard disk.				
Serial Number	Serial number of the installed hard disk				
Sector Size	Sector size of the installed hard disk				
Rotation Rate	Rotation speed of the installed hard disk				
Temperature (Celsius)	The current temperature of the installed disk in degree Celsius				
Uptime(Hour)	Count of hours in power-on state. The raw value of this				
	attribute shows total count of hours (or minutes, or seconds,				

depending (	n manufacturer)	) in	power-on	state.
-------------	-----------------	------	----------	--------

# iSCSI List

# Add iSCSI Target

To add iSCSI target volume, click **Add** from **iSCSI List** and associated screen will appear.

0.00	(WORDER		•	
Create on RAID:	KendoR5		•	
Target Name:	kendo01			
iqn Year & Month:	2015	* : 11	*	
Status	Oisable	Enable		
Advanced				

To allocate space for an iSCSI target on the current RAID volume, follow the steps below:

- 1. Select desired RAID volume from its drop down list to have iSCSI target created.
- 2. Enter a **Target Name**. This will be used by the **Stackable NAS** function to identify this export share.
- 3. Choose the current year from the **Year** dropdown.
- 4. Choose the current month from the **Month** dropdown.
- 5. Enable the **iSCSI Target Volume** by selecting *Enable*.

**NOTE** Be sure the iSCSI target volume has been enabled or it will not list out while using Initiator to get associated iSCSI target volumes.

Create on RAID:	KendoR5		*	
Target Name.	kendo01

Item	Description
iSCSI Target Volume	Enable or Disable the iSCSI Target Volume.
Target Name	Name of the iSCSI Target. This name will be used by the
	Stackable NAS function to identify this export share.
iqn_Year	Select the current year from the dropdown.
Iqn_Month	Select the current month from the dropdown.
Authentication	You may choose CHAP authentication or choose None.
Username	Enter a username.
Password	Enter a password.
Password Confirm	Reenter the chosen password
Mutual CHAP	With this level of security, the target and the initiator
	authenticate each other.
Username	Enter a username.
Password	Enter a password.
Password Confirm	Reenter the chosen password
RAID ID	ID of current RAID volume.
LUN Allocation	Two modes can be choose from:
	Thin-provision : iSCSI thin-provisioning shares the
	available physical capacity to multiple iSCSI target
	volumes. It allows virtual capacity to be assigned to targets
	prior to adding physical space when it has run out.
	Instant Allocation: Allocate available physical capacity to iSCSI target volumes.
LUN Name	Name of the LUN.

Unused	Unused space on current RAID volume.	
Allocation	Percentage and amount of space allocated to iSCSI	
	volume.	
LUN ID	Specific Logic unit ID number.	
iSCSI Block size	The iSCSI block size can be set under system advance	
	option, default is 512 Bytes. [ 4K ] block size while more than 2TB capacity will be	
	configured in Windows XP.	
	[ 512 Bytes ] block size for application like VMware etc.	

## **Advance Option**

There are available options for the user to operate Thecus IP storage associated with iSCSI setting. The details are listed in the following screenshot. If the options are modified, the system will need to reboot for the changes to take place.

Advanced			
MAX	Connections:	8	¥
Error I	Recovery Level:	2	•
InitialF	R2T:	No	¥
🗆 Da	ta Digest		
🗆 Не	ader Digest		
🗹 Em	ulate Write Cache		

#### Max Connections

The maximum number of iSCSI connections.

## **Error Recovery Level**

The Error Recovery Level (ERL) is negotiated during a leading iSCSI connection login in traditional iSCSI (RFC 3720) and iSER (RFC 5046).

#### **ERL=0: Session Recovery**

ERL=0 (Session Recovery) is triggered when failures within a command, within a connection, and/or within TCP occur. This causes all of the previous connections from the failed session to be restarted on a new session by sending a iSCSI Login Request with a zero TSIHRestart all iSCSI connections on any failure.

### ERL=1: Digest Failure Recovery

ERL=1, only applies to traditional iSCSI. For iSCSI/SCTP (which has its own CRC32C) and both types of iSER (so far), handling header and data checksum recovery can be disabled.

#### **ERL=2: Connection Recovery**

ERL=2, allows for both single and multiple communication path sessions within a iSCSI Nexus (and hence the SCSI Nexus) to actively perform realligence/retry on iSCSI ITTs from failed iSCSI connections. ERL=2 allows iSCSI fabrics to take advantage of recovery in all regards of transport level fabric failures, and in a completely OS independent fashion (i.e. below the host OS storage stack).

### initialR2T

InitialR2T is a setting that only really matters over high-latency WAN connections and perhaps in some exotic situations with synchronous writes to very, very fast storage.

#### iSCSI CRC/Checksum

To enable this option, the initiator can connect with "Data digest" and "Header digest".

#### **Emulate Write Cache**

To enable this option, the performance will increase. .

### Modify/Remove iSCSI Target

To modify or remove iSCSI target on the current RAID volume, follow the steps below:

1. Under the **iSCSI List**, click on desired iSCSI volume you like to modify or remove.

nable	kendo03	KendoR5	No Authority		iqn.2015- 11.com thecus n5810profiscsi kendo03 raid0

# NAS Stacking

The Thecus IP storage's capacity can be expanded even further using the stackable function. With it, users can expand the capacity of their network storage systems up to 5 other stack target volumes which are located in different systems. These can be stacked through single network access like SMB or AFP acting as a share folder type.

From the main menu, the **NAS Stacking** feature is located in **iSCSI** under "**Storage**". Please refer the figure below for reference.

## A. Add a Stack Target Volume

From the figure above, click *Create* to access the stackable target device configuration page. Please refer to the figure below:

With the added stack target you can "Enable" or "Disable" the stack target now or later depending on usage required.

Stacking Manager - Crea	ate Stack		×
Information			
Basic Settings			
Status:	Disable	Enable	
IP Address	Please Input IP Addres	s Here	

Next, input the target IP address of the stackable device and click the **Discovery Target** button. The system will list available target volumes from the inputted IP address.

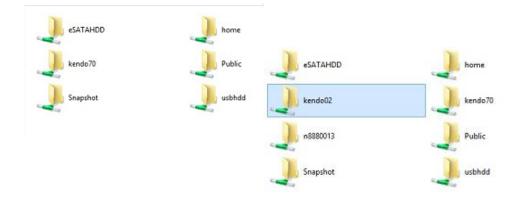

Stacking Manager - Create Stac	ck		×
Information			
Basic Settings			
Status:	O Disable @	Enable	
IP Address	172.16.66.30		
	Discovery Target		
Target IQN	iqn.2015-10.com.thecus.n88	380:iscsi.012.raid60	Ŧ
Device Folder	kendo02		
Comment:	stacking for additional space	e for pmnas	
Login User:			
Login Pass:			
Browsable:	Yes	No	
Public:	Yes	No	
			Apply Cancel

Select Target IQN from drop list whic will be the stacking device after connected.

The **Device Folder** will become the network share name and will be displayed through network access such as SMB. You may input **Comment** to tell the subject of this stack folder if needed.

For this associated stacking device, you may need to input a valid user name and password to validate your access rights. If there is no user name and password needed to access target volume, then leave it blank.

From the figure above, the **Device Folder** is "kendo02". The figures below show the result before and after via Microsoft Network Access when settings have been completed.

The **Browseable** setting is the same method used for setting a system share folder. It designates whether or not this folder will be visible through web disk. You may refer to the figure below for reference when **Yes** and **No** are selected.

The **Public** setting will be set the same way as the setting for the system share folder associated with the ACL permission is. The sample above of Device Folder "Kendo02" can be found from share folder list.

Create Edit & AC	SL .

n8880013	KendoR5	btrfs	Yes		

Click **Apply** to save your changes.

## B. Activate a Stack Target

After your settings have been applied, the system will bring you back to the **NAS Stacking List** window as shown below. There is one stack target device that has been attached into this stack master.

With this newly attached stack target device, you will see the information displayed .

iSCSI List	iSCSI Setting	NAS Stacking			
Create					
Device F	IP Address	Size (GB)	Status:	Description	Target IQN
kendo02	172.16.6		Connected	stacking for additional space for pmnas	iqn.2015- 10.com.thecus.n8880:iscsi.012.raid60
kendo70	172.16.6	0.01% 0.07GB/656.08GI	Mounted		iqn.2015-11.com.thecus.n4510upro- s:iscsi.test01.raid0

In general, clicking on associated stack target, if the attached stack target device has been used by another Thecus NAS as stack target volume, then the status **Mounted** will be displayed and system will recognize it straight away and display its capacity. Otherwise, the **Connected** will be displayed in **Status**. Now click on associated stack target and you will see the **File System Format** tab appear. Click on it to proceed with formatting.

iSCSI List	iSCSI Setting	NAS Stacking			
Create	Edit Reconn	ect File System Format			
Device F	IP Address	Size (GB)	Status:	Description	Target IQN
kendo02	172.16.6		Connected	stacking for additional space for pmnas	iqn.2015- 10.com.thecus.n8880.iscsi.012.raid60

	23	Transcend 8GB	7.5 GB	usb		
	24	DataTraveler 3.0	7.2 GB	usb		

## Disk Clone:

Unused Disks and plugin USB disks that have been installed on this storage device can utilize the disk clone function. If disks have already been configured in a RAID volume or as a spare disk, they cannot perform disk clone.

To start disk clone, select the source disk from the Source Disk drop down menu and target a disk from the dialog box as seen below. Carry on to press "Apply," then the task will start after confirmation. It may take a few hours depending on the size of the disk.

Please be sure the source disk is equal to or smaller than the target disk.

## Disk Wipe:

Disk Wipe is able to erase data from selected disks. Again, disks that have already been configured in a RAID volume or as a spare disk cannot perform this function.

To start disk wipe, select the disk from the list and carry on to press "Apply," then the task will start after confirmation. It may take a few hours depending on the size of the disk.

Mode		Fast		Full		
	Tray	Model	Capacity	Interface	Status	Log File
	5	WDC WD20EFRX-68E	1863 GB	tray		
App	ly .					

The task will list and status as shown below.

		Disk Clone and Wipe							
		Action	: Wipe						
		Mode

Backup	•									

## Samba Service

Used for letting the operating system of UNIX series and SMB/CIFS of Microsoft Windows operating system (Server Message Block / Common Internet File System).Do the link in network protocol. Enable or Disable SMB/CIFS protocol for Windows, Apple, Unix drive mapping.

For more options related to the Samba option, please click **Advanced** for details.

Advanced +		
General Setting		
File Access Cache		
Restrict Anonymous Login		
Native Mode		
Allow Trusted Domains		
INT ACL Support		
Allocated buffering size		
Block Size	4096	•
Server Signing	Disabled	٣
Support policy for LDAP	Plain	Ψ.

## File Access Cache

File Access Cache is default **Enable**. This option will help to increase the performance while single client access the share folder in writing under SMB/CIFS protocol.

#### **Restrict Anonymous Login**

To enable this option, no matter there is share folder has been created in public access. The user account and password is needed from system to access under SMB/CIFS protocol. On the other hand, no more anonymous login is allowed.

#### **Native Mode**

The Thecus IP storage is supported Samba mode options. In the ADS environment with "Native" mode selected then Thecus IP storage is capable to become local master position.

#### **Allowed Trusted Domain**

This is useful if you only want your Samba server to serve resources to users in the domain it is a member of. As an example, suppose that there are two domains DOMA and DOMB. DOMB is trusted by DOMA, which contains the Samba server. Under normal circumstances, a user with an account in DOMB can then access the resources of a UNIX account with the same account name on the Samba server even if they do not have an account in DOMA. This can make implementing a security boundary difficult.

## **NT ACL Support**

This setting controls whether Samba will attempt to map UNIX permissions into Windows NT access control lists.

## Allowed Buffering Size (Block Size)

This function controls the behavior of Samba when reporting available disk space. This function was added to allow advanced administrators to increase block size to increase write performance without re-compiling the code.

Disabled= 4k Enabled=256k

#### **Server Signing**

This is setting while Samba server has been used in US of FDCC. If the system has used only in Windows environment choose "Mandatory" otherwise "Auto".

## is Support policy for LDAP

The client LDAP sasl wrapping defines whether ldap traffic will be signed or signed and encrypted (sealed). Possible values are *plain*, *sign* and *seal*.

For Mac related option, please click on "Mac Related" for details.

#### **UNIX Extension**

The default is enabled for Samba usage, if there is a situation with using Mac OSX with smb connection, it may have permission issue. When it happens, please setup "UNIX Extension" disable to get issue solved.

#### **Hide Temporary File**

This is a list of files or directories that are not visible but are accessible

For Samba Recycled Bin related setting, please see below.

Recycle Bin 🕨		
Recycle Bin		
Enable Recycle Bin		
Display Folder		
Auto Deleted	0	🛔 days
Max File Size	0	🛔 GB

The Thecus IP storage is supported recycle bin via SMB/CIFS protocol.

Simply enable the "Recycle Bin" function and "Recycle Folder Display" then all of deleted files/folders will reside in the "\_NAS\_Recycle\_(Associated RDID Volume)" share folder.

For example, the system has created 2 RAID volumes with ID "RAIDpm" and 'RAID". Then it will have 2 recycle bin folder appear as "\_NAS\_Recycle\_RAID" and "\_NAS\_Recycle\_RAIDpm".

There are 2 more setting could help to manage the recycle bin for deleted folders/files.

- 1. Setup the "Day" to remove deleted folders/files which has resided in recycle bin permanently. Left default value "0" if desired to clean up recycle bin manually.
- 2. Setup the "Size" for recycle bin to allow deleted folders/files can store. Left default value "0" with no limitation.

ΝΟΤΕ	<ul> <li>The deleted files/folders which have resided in recycle bin will keep its permission. On the other hand, only the admin and owner can view/read/write these folders/files.</li> </ul>
	• If deleted single file size is large than 2GB then it won't reside in the recycle bin but erase permanently.

# AFP

From the **File Services** menu, choose the **AFP** item, and the **AFP Support** screen appears. This screen displays the configuration items for the Apple Filing Protocol. You can change any of these items and press **Apply** to confirm your settings.

# **UPnP Port Management**

One of the most convenient ways to allow users to access required services such as FTP, SSH, web disk and http etc. from Internet environment is setting UPnP port management.

To set up this UPnP port forwarding feature, please be sure that the router has "UPnP Service" Enabled. The following is an example from one of the router manufacture with UPnP Configuration page.

UPnP Service	Enable Disable
Clear port forwards at startup	Enable  Iisable
	ve Apply Settings Cancel Changes

After the router has enabled "UPnP Service" then you will have information come from associated router to UPnP port management as shown in the screen shot below.

### **Rsync Service**

Rsync Service is used for rsync remote backup astarget role. So while setup rsync remote backup the associated rsync service from target side is required. To enable Thecus NAS as rsync target role, click on Rsync Service under Backup category and the setting screen will appear as below.

Setting Panel				- ×
Q Function Search		Rsync Server		
Control				
Privilege	٣	Rsync Server		
Storage	٣			
Services		Enable Rsync		
Backup		User Name	backupadmin	
④ Local Backup		Password	••••	
ී Remote Backup		Advanced >		
O Rsync Service		Auvaliveu F		
🗟 USB Copy		Annhy		
AWS S3		Apply		
👩 System Failover				

1. Enable **Rsync Service** 

2. Add a **username** and **password** (they can be different than your NAS's username and password)

3. Select Apply

• You will need this user name and password while the data is going to remotely backup to this Rsync target server.

Now Rsync is turned on your NAS, which means it can be used as a target for Rsync backup, in other words, only the backup NAS needs to be activated in this way.

Click on **Advanced** to change network port or enable encryption transfer. If encryption transfer has been enabled, it needs to input both public and private keys. Or click on **Download keys** button to use system default.

Advanced + Port:	873	\$

Please refer to the link http://www.thecus.com/sp\_download\_page.php?TYPE\_ID=1&PROD\_ID=113

# **Chapter 5: General User Login**

### **Overview**

The Thecus IP storage provides an easily accessible connection for **General User** via web interface. With it, you can manage your own files and photos on Thecus IP storage anywhere on the network.

### General User Login Interface

Make sure your network is connected to the Internet and the system administrator has local user account created. To login Thecus IP storage as **General User**:

1. Type the Thecus IP storage IP address into your browser. (Default IP address is <a href="http://192.168.1.100">http://192.168.1.100</a>)

ThecusOS™ 7
Welcome
andy
Log In

 Login to the system using the valid system user name and password which is created by administrator. The example for user andy and password 0000:

Setting Panel								
Q Function Search		User Group User Q			User Quota	ta Backup & Restore		
Control	٧	Refres	h	Crea	te			
Privilege		-				-	Description	Admin
E Shared Folder		User ID		Us	ser Name	T	Description	Admin
Local Account		1000		pn				No
ADS		1001		an	idy			No
3 LDAP		1002		fal	bian			No

### User Name: andy Password: 0000

You will see the **General User Interface** as below. From here, you can manage your own files/photos, change password, select display language and monitor virtually every aspect of the Thecus IP storage from anywhere on the network.

### Menu Tree

The **Menu Tree** is where you will find the entry for each topic which General User can operate in the Thecus IP storage.

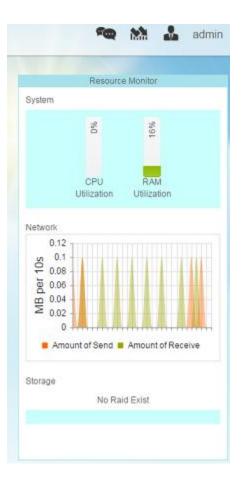

Menu Bar		
Item	Description	
App Center	The entry of App Center	
File Center	The entry of File Center	
Photo Center	The entry of Photo Center	

Moving your cursor over any of these items and click, it will display associated screen for each topic.

### **Quick System Resource Monitor**

On the top right hand corner of menu bar, click on and it will display the system resource monitor info such as CPU, memory and storage usage.

### Language Selection

The Thecus IP storage supports multiple Languages, including:

- English
- Japanese
- Traditional Chinese
- Simplified Chinese
- French
- German
- Italian
- Korean
- Spanish
- Russian
- Polish
- Portuguese

On the top right hand corner of menu bar, select desired language from drop down list. This user interface will switch to the selected language for Thecus IP storage.

### Logout

Click on logout to quit General User Web Interface.

### **Change Password**

On the top right hand corner of menu bar, select **Password** item and the **Change Password** screen appears. Enter a new password in the **New Password** box and confirm your new password in the **Verify** box. Press **Change** to confirm password changes.

Change	e Password	×

	Description:
-Same	Wing FTP Server is a highly functional, easy-to-use and secure FTP Server solution that can be used in Windows, Linux, Mac OSX and Solaris. It supports a number of file transfer protocols, including FTP, HTTP, FTPS, HTTPS and SFTP, giving your end-users flexibility in how they connect to the server. And it provides admins with a web based interface to administer the server from anywhere. You can also monito server performance and online sessions and even receive email notifications about various events taking place on the server.
	Features
Wing FTP	Major Features:
Enter App Page	Cross Platform
	You can run the server on Windows, Linux, Mac OSX and Solaris.
Latest Version	Multiple Protocols
4.3.8.1	Supports FTP, FTPS(FTP with SSL), HTTP, HTTPS, and SFTP(FTP with SSH).
現在版本	FIPS 140-2
4.3.8.1	Uses OpenSSL FIPS 140-2 validated cryptographic module (certificate #1051).
Module Size	Remote Web Based Administration
12.4MB	Administrate your file server anytime, anywhere.
Release Date	Web Based Client
2014-07-18	Access your files anytime, anywhere.
Developer	Multiple Domains
Stéphane	You can run multiple virtual servers on the same IP address.
Release Note	Task Scheduler
4.3.8.1	Uses the Lua scripting tasks to appoint an action at a specified time.

# File Center

The **File Center** allowed General NAS user to mange public, permitted and own files through web interface. Click on File Center icon and the system will display public system folder, associated ACL allowed folders and login user's **Home** folder.

The left pane has listed all available folders list for associated login user. The right pane will list details files/folders to against selected folder.

To manage files/folders using the function tabs or click on right button of mouse to bring out contact menu.

Manage share link	To manage share link list

#### A description for functions on File Center as following:

For above function list, sharing file is very useful tool that could have particular file shared instantly via URL or QR Code. And it could also protect by password if there is security concern.

To share the file, simply select desired file from file list then click on "Share" to have drop down menu appear. Click on "Share File" and setting screen will appear as below. Input the password to have shared file protected if needed. The shared file can also setup duration for haring period. Carry on to click on "Generate Share Link", system will generate URL and QR Code automatically. You could provide either one to whom have this file shared.

File Path	/raiddata/0/Public/1	/20140925	5_qu	otatio	n_T	hecus	
Retrieve Code Protection	***						
Set Expiration Time	2015/12/03		14	۲	-	52 ¥	
	Generate Share L	ink					
http://172.16.65.104/80/sha	res/7id=b5bb28e7-90e6-	4231-862	f-acb	0646	ae9	528sh	are_mode=5

For all of share link been generated, it can be managed from "Manage Share Link". Click on "Share" to bring out drop down menu list then select "Manage Share Link". The all existed share link will be listed.

Share Link				
Clear Invalid L	ink			
RAID Name	File Path	Expire Time	Password	Create Time
KendoR5	/Public/1/20140925_quotation_Thecus_uid5k_appnr	Indefinitely	Yes	2015-12-03 14:53:12
KendoR5	/Public/Untitled.jpg	Indefinitely	No	2015-12-03 14:33:42
KendoR5	/USBHDD/test	Indefinitely	No	2015-12-03 14:32:29
KendoR5	/HOME/andy/CR_QuickRef_Guide_2010_2.pdf	Indefinitely	No	2015-12-02 17:33:24

Click on "Clear Invalid Link", system will check listed share link for file path correctness. If found the file is no longer existed, the share link will be deleted. To manage single share link, click on desired one from share link list. The additional function tab will appear to allow you "Edit" or "Delete" associated share link.

Share Link				
Edit Delete	Clear Invalid Link			
RAID Name	File Path	Expire Time	Password	Create Time
KendoR5	/Public/1/20140925_quotation_Thecus_uid5k_appnr	Indefinitely	Yes	2015-12-03 14:53:12
KendoR5	/Public/Untitled.jpg	Indefinitely	No	2015-12-03 14:33:42
KendoR5	/USBHDD/test	Indefinitely	No	2015-12-03 14:32:29

To remove associated share link, simply click on "Delete". To add/remove password or make expire time, click on "Edit" to make the modification.

### **Photo Center**

The **Photo Center** allowed General NAS user to manger album and photos through web interface. Click on **Photo Center** icon and system will display album list and operation tabs to manage album and photos.

#### Photo Center

Album List					
$\langle \rangle$	Upload	Create Album	Operation <sub>v</sub>	Share 🔻	
P	17		a star		. tain
6	Theres Gen	214		Minist and	ALC: NOT A
	F.	-1		A Jerr	A Carle
		3 ·		TIME L	A L
	-			Lan-	TIT
				- (- A)	No IC
Tanna	0	Cebit		So	n S

### Click on created album to have all photos listed.

#### A description for functions on Photo Center as following:

UPnP Port Mana	gement
Item	Description
Upload	Upload the file(s) to associated NAS folder
Create Album	
Add	Allowed you to create folder
Operation	
Delete	Delete selected photo
Rename	Rename selected photo
Detail	Display selected photo details
Set as Cover	Set selected photo as album cover
Share	
Share album	Can generate share link/QR Code and shared associated album on the network
Share photo	Can generate share link/QR Code and shared associated photo on the network
Manage share link	To manage share link list

Just like sharing tool from File Center, Photo Center is also capable of this. The album and photo can be shared on the network with or without password protection and also setup sharing time.

Exactly same way as File Center to manage share link, system could validate all of created share link and allowed to add/remove password protection or sharing duration.

# **Chapter 6: Tips and Tricks**

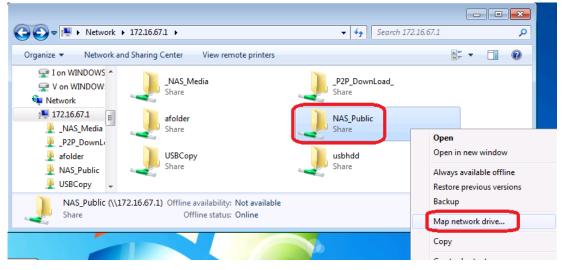

# Access your NAS from Windows

The quick way to access your Thecus IP storage from Windows is if the NAS IP is at 172.16.67.1, to access the NAS share folder, input 172.16.67.1 from file explore.

# Share folder accessibility with associated login user account

If it is an open permission share folder (PUBLIC =YES), just click the right mouse key to map network driver.

If it is nonpublic ACL share folder (PUBLIC =NO), you will need to key-in the user account & password which has been created on Thecus IP storage user database and permission granted.

Warning: Windows will auto save the connection account & password automatically. If you want to test multiple accounts & ACL, please doing test from FTP.

For more information and resources, see How to remove Windows saved network password.

# USB Storage Expansion

The Thecus IP storage supports external USB hard disks through its USB ports. Once a USB hard disk is successfully mounted, the entire volume will be linked automatically to the default USB HDD folder. The Thecus IP storage supports USB external storage devices. All file names on the USB disk volume are case sensitive.

Before attaching a USB disk drive to Thecus IP storage, you have to partition and format it on a desktop computer or a notebook first. The attached device will be located at  $\192.168.1.100\usbhdd\sd(x)1$  where 192.168.1.100 means the IP address of Thecus IP storage and sd(x)1 stands for the first partition on the USB disk drive.

### **Remote Administration**

You can set up your Thecus IP storage for remote administration. With remote administration, you can access your Thecus IP storage over the Internet, even if your Thecus IP storage is behind a router. This is especially useful if you are traveling and suddenly need a file from your Thecus IP storage.

Setting up remote administration is a three-part process, and will require the following equipment:

- Thecus IP storage device
- Cable / DSL Router with Dynamic DNS support
- Home PC
- Internet Connection

### Part I - Setup a DynDNS Account

- 1. Go to http://www.dyndns.org from your home PC.
- 2. Click on the **Sign Up Now** link.
- Check the Check boxes, select a user name (i.e.: N5810), enter your email address (i.e.: xxx@example.com), check *Enable Wildcard*, and create a password (i.e.: xxxx).
- 4. Wait for an email from www.dyndns.org.
- 5. Open the email and click on the link to activate your account

### Part II - Enable DDNS on the Router

- 1. Go to the router setup screen and select *IP Config* > *Miscellaneous DDNS Setting* from your Home PC.
- 2. Click on Yes for Enable the DDNS Client?
- 3. Select www.dyndns.org.
- 4. Go to router setup screen, and enter the following information:
  - a. User Name or E-mail Address: xxx@example.com
    - b. Password or DDNS Key: **xxxx**
    - c. Host Name: www.N5810.dyndns.org
    - d. Enable wildcard? Select Yes
    - e. Update Manually: Click Update

### Part III - Setting up Virtual Servers (HTTPS)

- 1. Navigate to **NAT Setting** > **Virtual Server**.
- 2. For Enable Virtual Server?, select Yes
- 3. Setup the HTTPS Server
  - a. Well-Known Applications: Select User Defined
  - b. Local IP: Enter 192.168.1.100
  - c. **Port Range**: **44**3 (the default HTTPS port setting on the Thecus IP storage)
  - d. Protocol: select TCP
  - e. Click Add.
  - f. Click **Apply**.
- 4. Test the HTTPS connection from another computer on the Internet
  - a. From a remote computer, open your browser and enter https://www.N5810.dyndns.org
  - b. You should see the login page of Thecus IP storage.

### Firewall Software Configuration

If you are using a software firewall (i.e. Norton Internet Security) and are having trouble connecting to Thecus IP storage, you can try the following steps:

- 1. Double click the **NIS** icon on system tray, and then configure the **Personal Firewall**.
- 2. On the **Programs** page, find the **SetupWizard.exe** and change its permission to "Permit All". If it's not in the program list, use the **Add** or **Program Scan** buttons to find it.
- 3. On the **Networking** page, manually add Thecus IP storage IP address (i.e. 192.168.1.100) to the **Trusted** list.

# **Replacing Damaged Hard Drives**

If you are using RAID 1 you can easily replace a damaged hard drive in the Thecus IP storage while keeping your data secure with the system's automatic data recovery.

### Hard Drive Damage

When a hard drive is damaged and data in the RAID volume is corrupted, the system will beep to notify the status.

### **Replacing a Hard Drive**

To replace a hard disk drive in the Thecus IP storage:

- 1. Remove the tray with the damaged hard disk.
- 2. Unscrew the damaged hard disk and remove it from the tray.
- 3. Slide a new hard disk into the tray and fasten the screws.
- 4. Insert the hard disk tray back into the Thecus IP storage until it snaps into place. You can also lock it with a key if desired.
- 5. The LED will blink green when the HDD is accessed.

### **RAID Auto-Rebuild**

When using RAID 1 on the Thecus IP storage, you can use the auto-rebuild function when an error is detected.

- 1. When a hard disk fails the system beeps and/or an email notification is sent to the specified receivers.
- 2. Follow the steps mentioned above to replace the failed hard disk.
- 3. The system automatically recognizes the new hard disk and starts the auto-rebuild sequence to resume its status before the hard disk crash.

# **Chapter 7: Troubleshooting**

# Forgot My Network IP Address

If you forget your network IP address and have no physical access to the system, you can find out the IP address by using the setup wizard to retrieve the IP of your Thecus IP storage.

- 1. Start the Setup Wizard, and it will automatically detect all Thecus IP storage products on your network.
- 2. You should be able to find the IP address of the Thecus IP storage which you have forgotten in the **Device Discovery** screen.

# Can't Map a Network Drive in Windows XP

You may have problems mapping a network drive under the following conditions:

- 1. The network folder is currently mapped using a different user name and password. To connect using a different user name and password, first disconnect any existing mappings to this network share.
- 2. The mapped network drive could not be created because the following error has occurred: **Multiple connections to a server or shared resource by the same user, using more than one user name, are not allowed.** Disconnect all previous connections to the server or shared resource and try again.

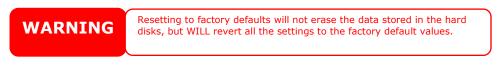

To check out existing network connections, type net use under the DOS prompt. You may refer the URL below for more network mapping information.

http://thecus.kayako.com/default\_import/Knowledgebase/Article/View/541/0/thr ee-ways-to-remove-windows7-saved-network-password

http://thecus.kayako.com/default\_import/Knowledgebase/Article/View/113/0/wh at-is-unc-path

### **Restoring Factory Defaults**

From the **Firmware Setting** menu, choose the **Reset to Default** item and **the Reset to Factory Default** screen appears. Press **Apply** to reset Thecus IP storage factory default settings.

# **Problems with Time and Date Settings**

The administrator is able to select an NTP Server to keep Thecus IP storage time synchronized. However, if Thecus IP storage cannot access the Internet, you may encounter a problem when setting the Time and Time Zone. If this happens:

- 1. Login to the Web Administration Interface.
- 2. Navigate to **Regional Option>NTP Service**.
- 3. Under **NTP Service**, untick to disable.
- 4. Set the **Date**, **Time**, and **Time Zone** manually from **Date/Time**.
- 5. Click **Apply**.

In addition, if the Thecus IP storage is able to access the Internet and you want to keep the NTP Server clock.isc.org by default, please make sure the DNS Server is correctly entered, thereby allowing the NTP Server name to correctly resolve. (See **Network** > **Host Setting** > **DNS Setting**)

# **Appendix A: Customer Support**

If your Thecus IP storage is not working properly, we encourage you to check out **Chapter 7: Troubleshooting**, located in this manual. You can also try to ensure that you are using the latest firmware version for your Thecus IP storage. Thecus is committed to providing free firmware upgrades to our customers. Our newest firmware is available on our Download Center:

http://www.thecus.com/sp\_download.php

If you are still experiencing problems with your Thecus IP storage, or require a Return Merchandise Authorization (RMA), feel free to contact technical support via our Technical Support Website:

http://www.thecus.com/sp\_tech.php

For Sales Information you can e-mail us at:

sales@thecus.com

# Thank you for choosing Thecus!

# Appendix B: RAID Basics

### Overview

A Redundant Array of Independent Disks (RAID) is an array of several hard disks that provide data security and high performance. A RAID system accesses several hard disks simultaneously, which improves I/O performance over a single hard disk. Data security is enhanced by a RAID, since data loss due to a hard disk failure is minimized by regenerating redundant data from the other RAID hard disks.

### **Benefits**

RAID improves I/O performance, and increases data security through fault tolerance and redundant data storage.

### Improved Performance

RAID provides access to several hard disk drives simultaneously, which greatly increases I/O performance.

### Data Security

Hard disk drive failure unfortunately is a common occurrence. A RAID helps prevent against the loss of data due to hard disk failure. A RAID offers additional hard disk drives that can avert data loss from a hard disk drive failure. If a hard drive fails, the RAID volume can regenerate data from the data and parity stored on its other hard disk drives.

### **RAID Levels**

The Thecus IP storage supports standard RAID levels 0, 1, 5, 6, 10, 50, 60 and JBOD. You choose a RAID level when you create a system volume. The factors for selecting a RAID level are:

- Your requirements for performance
- Your need for data security
- Number of hard disk drives in the system, capacity of hard disk drives in the system

The following is a description of each RAID level:

### RAID 0

RAID 0 is best suited for applications that need high bandwidth but do not require a high level of data security. The RAID 0 level provides the best performance of all the RAID levels, but it does not provide data redundancy.

RAID 0 uses disk striping and breaking up data into blocks to write across all hard drives in the volume. The system can then use multiple hard drives for faster read and write. The stripe size parameter that was set when the RAID was created determines the size of each block. No parity calculations complicate the write operation.

### RAID 1

RAID 1 mirrors all data from one hard disk drive to a second one hard disk drive, thus providing complete data redundancy. However, the cost of data storage capacity is doubled.

This is excellent for complete data security.

### RAID 5

RAID 5 offers data security and it is best suited for networks that perform many small I/O transactions at the same time, as well as applications that require data security such as office automation and online customer service. Use it also for applications with high read requests but low write requests.

RAID 5 includes disk striping at the byte level and parity information is written to several hard disk drives. If a hard disk fails the system uses parity stored on each of the other hard disks to recreate all missing information.

# RAID 6

RAID 6 is essentially an extension of RAID level 5 which allows for additional fault tolerance by using a second independent distributed parity scheme (dual parity) Data is striped on a block level across a set of drives, just like in RAID 5, and a second set of parity is calculated and written across all the drives; RAID 6 provides for an extremely high data fault tolerance and can sustain two simultaneous drive failures.

This is a perfect solution for mission critical applications.

# RAID 10

RAID 10 is implemented as a striped array whose segments are RAID 1 arrays. RAID 10 has the same fault tolerance as RAID level 1.

RAID 10 has the same overhead for fault-tolerance as mirroring alone. High I/O rates are achieved by striping RAID 1 segments.

Under certain circumstances, RAID 10 array can sustain up to 2 simultaneous drive failures

Excellent solution for applications that would have otherwise gone with RAID 1 but need an additional performance boost.

### RAID 50

A RAID 50 combines the straight block-level striping of RAID 0 with the distributed parity of RAID 5. This is a RAID 0 array striped across RAID 5 elements. It requires at least 6 drives.

### RAID 60

A RAID 60 combines the straight block-level striping of RAID 0 with the distributed double parity of RAID 6. That is, a RAID 0 array striped across RAID 6 elements. It requires at least 8 disks.

### JBOD

Although a concatenation of disks (also called JBOD, or "Just a Bunch of Disks") is not one of the numbered RAID levels, it is a popular method for combining multiple physical disk drives into a single virtual one. As the name implies, disks are merely concatenated together, end to beginning, so they appear to be a single large disk.

As the data on JBOD is not protected, one drive failure could result total data loss.

### **Stripe Size**

The length of the data segments being written across multiple hard disks. Data is written in stripes across the multiple hard disks of a RAID. Since multiple disks are accessed at the same time, disk striping enhances performance. The stripes can vary in size.

### **Disk Usage**

When all disks are of the same size, and used in RAID, Thecus IP storage disk usage percentage is listed below:

RAID Level	Percentage Used
RAID 0	100%
RAID 1	1/n x 100%
RAID 5	(n-1)/n x 100%
RAID 6	(n-2)/n x 100%
RAID 10	50%
RAID 50	(n-1)/n x 100%
RAID 60	(n-2)/n x 100%
JBOD	100%

n : HDD number

# **Appendix C: Active Directory Basics**

### Overview

With Windows 2000, Microsoft introduced Active Directory (ADS), which is a large database/information store. Prior to Active Directory the Windows OS could not store additional information in its domain database. Active Directory also solved the problem of locating resources; which previously relied on Network Neighborhood, and was slow. Managing users and groups were among other issues Active Directory solved.

# What is Active Directory?

Active Directory was built as a scalable, extensible directory service that was designed to meet corporate needs. A repository for storing user information, accounts, passwords, printers, computers, network information and other data, Microsoft calls Active Directory a "namespace" where names can be resolved.

# ADS Benefits

ADS lets Thecus IP storage integrate itself with the existing ADS in an office environment. This means the Thecus IP storage is able to recognize your office users and passwords on the ADS server. Other major benefits ADS support provides include:

1. Easy integration of Thecus IP storage into the existing office IT infrastructure

The Thecus IP storage acts as a member of the ADS. This feature significantly lowers the overhead of the system administrator. For example, corporate security policies and user privileges on an ADS server can be enforced automatically on Thecus IP storage.

2. Centralized user/password database

The Thecus IP storage does not maintain its own copy of the user/password database. This avoids data inconsistency between Thecus IP storage and other servers. For example, without ADS support, an administrator might need to remove a specific user privilege on Thecus IP storage and each individual server. With ADS support, the change on an ADS server is known to all of its ADS members.

# **Appendix D: Licensing Information**

### Overview

This product included copyrighted third-party software licensed under the terms of GNU General Public License. Please see THE GNU General Public License for extra terms and conditions of this license.

# Source Code Availability

Thecus Technology Corp. has exposed the full source code of the GPL licensed software. For more information on how you can obtain our source code, please visit our web site, http://www.thecus.com.

# CGIC License Terms

Basic License

CGIC, copyright 1996, 1997, 1998, 1999, 2000, 2001, 2002, 2003, 2004 by Thomas Boutell and Boutell.Com, Inc.

Permission is granted to use CGIC in any application, commercial or noncommercial, at no cost. HOWEVER, this copyright paragraph must appear on a "credits" page accessible in the public online and offline documentation of the program. Modified versions of the CGIC library should not be distributed without the attachment of a clear statement regarding the author of the modifications, and this notice may in no case be removed. Modifications may also be submitted to the author for inclusion in the main CGIC distribution.

### **GNU General Public License**

Version 2, June 1991

Copyright  $\ensuremath{\mathbb{C}}$  1989, 1991 Free Software Foundation, Inc. 51 Franklin St, Fifth Floor, Boston, MA 02110-1301 USA

Everyone is permitted to copy and distribute verbatim copies of this license document, but changing it is not allowed.

### PREAMBLE

The licenses for most software are designed to take away your freedom to share and change it. By contrast, the GNU General Public License is intended to guarantee your freedom to share and change free software--to make sure the software is free for all its users. This General Public License applies to most of the Free Software

Foundation's software and to any other program whose authors commit to using it. (Some other Free Software Foundation software is covered by the GNU Library General Public License instead.) You can apply it to your programs, too.

When we speak of free software, we are referring to freedom, not price. Our General Public Licenses are designed to make sure that you have the freedom to distribute copies of free software (and charge for this service if you wish), that you receive source code or can get it if you want it, that you can change the software or use pieces of it in new free programs; and that you know you can do these things.

To protect your rights, we need to make restrictions that forbid anyone to deny you these rights or to ask you to surrender the rights. These restrictions translate to certain responsibilities for you if you distribute copies of the software, or if you modify it.

For example, if you distribute copies of such a program, whether gratis or for a fee, you must give the recipients all the rights that you have. You must make sure that they, too, receive or can get the source code. And you must show them these terms so they know their rights.

We protect your rights with two steps: (1) copyright the software, and (2) offer you this license which gives you legal permission to copy, distribute and/or modify the software.

Also, for each author's protection and ours, we want to make certain that everyone understands that there is no warranty for this free software. If the software is modified by someone else and passed on, we want its recipients to know that what they have is not the original, so that any problems introduced by others will not reflect on the original authors' reputations.

Finally, any free program is threatened constantly by software patents. We wish to avoid the danger that redistributors of a free program will individually obtain patent licenses, in effect making the program proprietary. To prevent this, we have made it clear that any patent must be licensed for everyone's free use or not licensed at all.

The precise terms and conditions for copying, distribution and modification follow.

TERMS AND CONDITIONS FOR COPYING, DISTRIBUTION AND MODIFICATION

 This License applies to any program or other work which contains a notice placed by the copyright holder saying it may be distributed under the terms of this General Public License. The "Program", below, refers to any such program or work, and a "work based on the Program" means either the Program or any derivative work under copyright law: that is to say, a work containing the Program or a portion of it, either verbatim or with modifications and/or translated into another Language. (Hereinafter, translation is included without limitation in the term "modification".) Each licensee is addressed as "you".

Activities other than copying, distribution and modification are not covered by this License; they are outside its scope. The act of running the Program is not restricted, and the output from the Program is covered only if its contents constitute a work based on the Program (independent of having been made by running the Program).

Whether that is true depends on what the Program does.

2. You may copy and distribute verbatim copies of the Program's source code as you receive it, in any medium, provided that you conspicuously and appropriately publish on each copy an appropriate copyright notice and disclaimer of warranty; keep intact all the notices that refer to this License and to the absence of any warranty; and give any other recipients of the Program a copy of this License along with the Program.

You may charge a fee for the physical act of transferring a copy, and you may at your option offer warranty protection in exchange for a fee.

- 3. You may modify your copy or copies of the Program or any portion of it, thus forming a work based on the Program, and copy and distribute such modifications or work under the terms of Section 1 above, provided that you also meet all of these conditions:
  - a) You must cause the modified files to carry prominent notices stating that you changed the files and the date of any change.
  - b) You must cause any work that you distribute or publish, that in whole or in part contains or is derived from the Program or any part thereof, to be licensed as a whole at no charge to all third parties under the terms of this License.

c) If the modified program normally reads commands interactively when run, you must cause it, when started running for such interactive use in the most ordinary way, to print or display an announcement including an appropriate copyright notice and a notice that there is no warranty (or else, saying that you provide a warranty) and that users may redistribute the program under these conditions, and telling the user how to view a copy of this License. (Exception: if the Program itself is interactive but does not normally print such an announcement, your work based on the Program is not required to print an announcement.)

These requirements apply to the modified work as a whole. If identifiable sections of that work are not derived from the Program, and can be reasonably considered independent and separate works in themselves, then this License, and its terms, do not apply to those sections when you distribute them as separate works. But when you distribute the same sections as part of a whole which is a work based on the Program, the distribution of the whole must be on the terms of this License, whose permissions for other licensees extend to the entire whole, and thus to each and every part regardless of who wrote it.

Thus, it is not the intent of this section to claim rights or contest your rights to work written entirely by you; rather, the intent is to exercise the right to control the distribution of derivative or collective works based on the Program.

In addition, mere aggregation of another work not based on the Program with the Program (or with a work based on the Program) on a volume of a storage or distribution medium does not bring the other work under the scope of this License.

 You may copy and distribute the Program (or a work based on it, under Section 2) in object code or executable form under the terms of Sections 1 and 2 above provided that you also do one of the following:

a) Accompany it with the complete corresponding machine-readable source code, which must be distributed under the terms of Sections 1 and 2 above on a medium customarily used for software interchange; or,

b) Accompany it with a written offer, valid for at least three years, to give any third party, for a charge no more than your cost of physically performing source distribution, a complete machine-readable copy of the corresponding source code, to be distributed under the terms of Sections 1 and 2 above on a medium customarily used for software interchange; or,

c) Accompany it with the information you received as to the offer to distribute corresponding source code. (This alternative is allowed only for noncommercial distribution and only if you received the program in object code or executable form with such an offer, in accord with Subsection b above.)

The source code for a work means the preferred form of the work for making modifications to it. For an executable work, complete source code means all the source code for all modules it contains, plus any associated interface definition files, plus the scripts used to control compilation and installation of the executable. However, as a special exception, the source code distributed need not include anything that is normally distributed (in either source or binary form) with the major components (compiler, kernel, and so on) of the

operating system on which the executable runs, unless that component itself accompanies the executable.

If distribution of executable or object code is made by offering access to copy from a designated place, then offering equivalent access to copy the source code from the same place counts as distribution of the source code, even though third parties are not compelled to copy the source along with the object code.

- 5. You may not copy, modify, sublicense, or distribute the Program except as expressly provided under this License. Any attempt otherwise to copy, modify, sublicense or distribute the Program is void, and will automatically terminate your rights under this License. However, parties who have received copies, or rights, from you under this License will not have their licenses terminated so long as such parties remain in full compliance.
- 6. You are not required to accept this License, since you have not signed it. However, nothing else grants you permission to modify or distribute the Program or its derivative works. These actions are prohibited by law if you do not accept this License. Therefore, by modifying or distributing the Program (or any work based on the Program), you indicate your acceptance of this License to do so, and all its terms and conditions for copying, distributing or modifying the Program or works based on it.
- 7. Each time you redistribute the Program (or any work based on the Program), the recipient automatically receives a license from the original licensor to copy, distribute or modify the Program subject to these terms and conditions. You may not impose any further restrictions on the recipients' exercise of the rights granted herein. You are not responsible for enforcing compliance by third parties to this License.
- 8. If, as a consequence of a court judgment or allegation of patent infringement or for any other reason (not limited to patent issues), conditions are imposed on you (whether by court order, agreement or otherwise) that contradict the conditions of this License, they do not excuse you from the conditions of this License. If you cannot distribute so as to satisfy simultaneously your obligations under this License and any other pertinent obligations, then as a consequence you may not distribute the Program at all. For example, if a patent license would not permit royalty-free redistribution of the Program by all those who receive copies directly or indirectly through you, then the only way you could satisfy both it and this License would be to refrain entirely from distribution of the Program.

If any portion of this section is held invalid or unenforceable under any particular circumstance, the balance of the section is intended to apply and the section as a whole is intended to apply in other circumstances.

It is not the purpose of this section to induce you to infringe any patents or other property right claims or to contest validity of any such claims; this section has the sole purpose of protecting the integrity of the free software distribution system, which is implemented by public license practices. Many people have made generous contributions to the wide range of software distributed through that system in reliance on consistent application of that system; it is up to the author/donor to decide if he or she is willing to distribute software through any other system and a licensee cannot impose that choice. This section is intended to make thoroughly clear what is believed to be a consequence of the rest of this License.

- 9. If the distribution and/or use of the Program is restricted in certain countries either by patents or by copyrighted interfaces, the original copyright holder who places the Program under this License may add an explicit geographical distribution limitation excluding those countries, so that distribution is permitted only in or among countries not thus excluded. In such case, this License incorporates the limitation as if written in the body of this License.
- 10. The Free Software Foundation may publish revised and/or new versions of the General Public License from time to time. Such new versions will be similar in spirit to the present version, but may differ in detail to address new problems or concerns.

Each version is given a distinguishing version number. If the Program specifies a version number of this License which applies to it and "any later version", you have the option of following the terms and conditions either of that version or of any later version published by the Free Software Foundation. If the Program does not specify a version number of this License, you may choose any version ever published by the Free Software Foundation.

11. If you wish to incorporate parts of the Program into other free programs whose distribution conditions are different, write to the author to ask for permission. For software which is copyrighted by the Free Software Foundation, write to the Free Software Foundation; we sometimes make exceptions for this. Our decision will be guided by the two goals of preserving the free status of all derivatives of our free software and of promoting the sharing and reuse of software generally.

#### NO WARRANTY

- 12. BECAUSE THE PROGRAM IS LICENSED FREE OF CHARGE, THERE IS NO WARRANTY FOR THE PROGRAM, TO THE EXTENT PERMITTED BY APPLICABLE LAW. EXCEPT WHEN OTHERWISE STATED IN WRITING THE COPYRIGHT HOLDERS AND/OR OTHER PARTIES PROVIDE THE PROGRAM "AS IS" WITHOUT WARRANTY OF ANY KIND, EITHER EXPRESSED OR IMPLIED, INCLUDING, BUT NOT LIMITED TO, THE IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE. THE ENTIRE RISK AS TO THE QUALITY AND PERFORMANCE OF THE PROGRAM IS WITH YOU. SHOULD THE PROGRAM PROVE DEFECTIVE, YOU ASSUME THE COST OF ALL NECESSARY SERVICING, REPAIR OR CORRECTION.
- 13. IN NO EVENT UNLESS REQUIRED BY APPLICABLE LAW OR AGREED TO IN WRITING WILL ANY COPYRIGHT HOLDER, OR ANY OTHER PARTY WHO MAY MODIFY AND/OR REDISTRIBUTE THE PROGRAM AS PERMITTED ABOVE, BE LIABLE TO YOU FOR DAMAGES, INCLUDING ANY GENERAL, SPECIAL, INCIDENTAL OR CONSEQUENTIAL DAMAGES ARISING OUT OF THE USE OR INABILITY TO USE THE PROGRAM (INCLUDING BUT NOT LIMITED TO LOSS OF DATA OR DATA BEING RENDERED INACCURATE OR LOSSES SUSTAINED BY YOU OR THIRD PARTIES OR A FAILURE OF THE PROGRAM TO OPERATE WITH ANY OTHER PROGRAMS), EVEN IF SUCH HOLDER OR OTHER PARTY HAS BEEN ADVISED OF THE POSSIBILITY OF SUCH DAMAGES.

### END OF TERMS AND CONDITIONS
