PRIMERGY TX1330 M4
The FUJITSU Server PRIMERGY TX1330 M4 is an advanced technology, highly expandable and robust mono-socket server versatile enough for use across multiple industries plus classic small and medium-sized enterprise requirements. It features the latest in processing and memory for appropriately sized workloads such as file/print, web, ERP/CRM, email, business specific applications plus use cases with high storage requirement such as centralized storage and databases. The mono-socket tower system features

the latest powerful Intel® Xeon® E-2100 product family processors with up to 64 GB DDR4 memory at 2,666 MT/s, to boost application performance. The server is designed for high levels of secure expandability with up to 24x 2.5-inch hot-plug storage devices (3.5-inch drive configurations are also available) along with 4x ultra-fast NVMe devices (up to 16x 2.5-inch devices can be fielded alongside), advanced RAID controllers (up to 4/8GB cache) and data back-up options, making it ideal for consolidating and managing large datasets. Up to 4 PCIe slots are available to add both RAID cards as well as networking options (such as 10/25 Gb controllers). High availability features such as the optional Fujitsu Battery Backup Unit, high-efficiency (94%), redundant power supplies or redundant fans ease operator concerns and provide investment protection. The aesthetic design makes it suitable for deployment in public areas such as showrooms, retail premises or offices. New generation technologies include M.2 modules for efficient OS installation along with Dual microSD capability for VMware ESXi, plus the latest USB 3.1 Gen 2 ports. Furthermore, advanced server management is available via the iRMC S5, which allows remote management capabilities, and the Fujitsu ServerView® Suite, which provides administrators with comprehensive support during server installation, deployment and administration.

Features & Benefits

Main Features	Benefits
Advanced technology for workload-versatile performance ■ Workload versatile with the combination of the latest Intel® Xeon® E-2100 processors, and up to 64GB DDR4 memory (4 DIMMs) at 2,666 MT/s. Affordable Core™ i3 and Pentium® processors are also available.	■ The server compute and memory can be optimized for most appropriately sized standard workloads across industries. Intel® Xeon® E-2100 processors offer higher performance for more demanding compute needs. The workloads can range from appropriately sized, individual to virtualized multi-app environments including workloads such as File/Print, Email, ERP/CRM, Messaging, Centralized data storage and industry specific applications.
High storage and networking expandability ■ Server supports up to 4x NVMe devices plus either 8x3.5-inch storage devices or 16x2.5-inch devices. Maximal capacity with standard drives is up to 12x3.5-inch devices, or up to 24x2.5-inch devices. It also supports Fujitsu's powerful RAID controllers (including SAS 3.0, 4/8 GB cache). Backup options include LTO and RDX. Security optimization includes TPM 2.0 support plus Fujitsu's secure 3-way lock for server access. Server also features redundant (2x1GbE) LAN as standard plus advanced networking options (10/25Gb Ethernet, Fiber Channel controllers).	■ NVMe drives offer ultra-fast storage for low-latency applications, while the server's huge storage capacity offers secure, cost-effective capability to consolidate and manage large datasets, combined with growth potential. Redundant LAN offers reliable data connectivity out of the box. Advanced options such as 10/25 GbE or Fiber Channel networking cards offer high data transfer for demanding environments, e.g. virtualized environments or centralized storage.
Future ready, today ■ 4x PCIe Gen3 slots for expansion and deployment flexibility via rack upgrade capability.	■ PCI expansion slots permit timely, cost-effective upgrades in line with your business growth. Upgrade the server with a graphics card, or Fujitsu RAID controllers for reliable data storage or advanced networking options for seamless data transmission. Similarly, a rack kit provides investment protection. As their business grows, customers can deploy multiple PRIMERGY TX1330 M4 servers in a rack.
Technology update for enhanced utilization ■ Support of 2x M.2 modules: 1x SATA; 1x NVMe/SATA and Dual micro-SD modules for efficient boot requirements. New 3.1 Gen2 USB ports (2x 3.1 Gen2 plus 2x 3.1 Gen1, 4x 2.0, Internal 2x 3.1 Gen1) for enhanced connectivity.	■ For effective boot options choose from amongst cost-effective and reliable mirrored SATA modules or deploy high-speed NVMe devices, while Dual microSD modules support mirrored VMware ESXi boot. Technology update with new high data rate USB is good for latest generation peripheral devices.
High reliability for investment protection ■ High efficiency 450W power supplies (94% efficiency) are available with both hot-plug capability and redundancy. Fujitsu Battery Backup Unit an optional Internal UPS in modular PSU form-factor, 5 years lifetime, fully integrated.	■ Good for the environment, and your business – the high efficiency, redundant power supplies offer enhanced reliability and lower energy expenditure. The Battery Backup Unit protects your valuable investment by supporting safe power down and expanded server operation time in case of power loss.
Expanded deployment capability ■ Optimized air flow and Fujitsu's Cool-safe ® Advanced Thermal Design technology.	■ Expanded range of operation (5 ℃ to 45 ℃) and also reduces noise emissions, making the server suitable for deployment in public areas.
Full server management features and easy serviceability ■ Comprehensive software management suite and easy to service design to reduce your IT administrator's burden.	■ Simplified server management via a comprehensive software suite which can include the iRMC S5 and the Fujitsu ServerView suite, which includes tools for installation and deployment, permanent status monitoring and control. Server also features a screw-less chassis with hot-plug 2.5-inch devices, hot-plug PSUs and "Easy Rails" for 3.5-inch storage disks for efficient access to critical components.
