SMA-6612

SMA-6612

Inter-Tech Elektronik Handels GmbH

The SMA-6612 wall-mounted rack stands out for its low height of just 12U and a depth of only 450mm, offering a space-saving alternative compared to large and bulky server & network cabinets.

With a material thickness between 1.25 and 1.50 mm, the wall-mounted rack carries a total load of up to 40kg and also complies with the IP20 protection class. The rack is powder-coated in the colour RAL 9005 and can be closed both by the integrated door made of tempered glass and by the individually removable side panels. Cable inlets in the lid and in the floor also ensure a clean routing of the cables. Two optional 120mm fans, which find their place in the lid, support the case during ventilation.

- √12U and 450mm depth
- √ Total loading capacity of up to 40kg
- ✓ Meets protection class IP20
- ✓ Lockable glass door and side panels
